LIST OF TABLES

1. A,B,O Blood Groups, Sickle Cell Traits of Tribal Groups ........................................ 31
2. List of Blocks Selected ................................................................................................. 33
3. Sample covered ............................................................................................................. 51
4. Mean Anthropometric Measurements of Preschool Children By Age and Tribe - Males . 52
5. Mean Anthropometric Measurements of Preschool Children By Age and Tribe - Females 53
6. Mean Anthropometric Measurements of School Age Children By Age and Tribe - Males . 64
7. Mean Anthropometric Measurements of School Age Children By Age and Tribe - Females 65
8. Mean anthropometric measurements of adolescents by age and tribe - Males .............. 75
9. Mean anthropometric measurements of adolescents by age and tribe - Females .......... 77
10. Mean anthropometric measurements of adults by age and tribe - Males ................. 88
11. Mean anthropometric measurements of adults by age and tribe - Females ............... 89
12. Results of tests of significance between group means of preschool children by anthropometric measurements and age - Males 99
13. Results of tests of significance between group means of preschool children by anthropometric measurements and age - Females 100
14. Percentage distribution of preschool children according to Gomez's Classification - Districts ................................................................. 101
15. Percentage distribution of preschool children according to Waterlow's Classification - Districts ................................................................. 102
16. Results of tests of significance between group means of school age children by anthropometric measurements and age - Males 105
17. Results of tests of significance between group means of school age children by anthropometric measurements and age - Females 106
18. Results of tests of significance between group means of adolescents by anthropometric measurements and age - Males 107
19. Results of tests of significance between group means of adolescents by anthropometric measurements and age - Females 108
20. Results of tests of significance between group means of adults according to anthropometric measurements and age - Males 109
21. Results of tests of significance between group means of adults according to anthropometric measurements and age - Females 110
22. Mean anthropometric measurements of adults by age and tribe - Males ................. 111
23. Tests of significance of mean anthropometric measurements between tribes - Adult Males ................................................................. 113
24. Results of significance of mean anthropometric measurements between tribes - Adult Males ................................................................. 114
25. Correlation coefficient between height and weight by age and in Tribal Groups - Males 132
26. Correlation coefficients between anthropometric measurements by age and tribal groups - Females ................................................................. 136
27. Details of functions, eigen values and percent of variance explained and canonical correlations with four measurements -Males/Age .......... 143
28. Details of functions, eigen values and percent of variance explained and canonical correlations with four measurements
- Females/Age
29. Details of functions, eigen values and percent of variance explained and canonical correlations (all measurements)
- Males By Age
30. Details of anthropometric variables with maximum discriminatory power contributing maximum to the functions by age (4 measurements) - Males
31. Details of anthropometric variables with maximum discriminating power contributing maximum to the functions by age (4 measurements) - Females
32. Details of anthropometric variables with maximum discriminating power contributing of maximum to the functions by functions by age (All measurements) - Males
33. Mean values of group centroids of discriminant scores of tribal groups by age (4 measurements) - Males
34. Mean values of group centroids of discriminant scores of tribal groups by age (4 measurements) - Females
35. Mean values of group centroids of discriminant scores of tribal groups by age (all measurements) - Adult Males
36. Percent of grouped cases correctly classified by discriminant function (4 measurements) by age and sex
37. Percent of grouped cases classified by discriminant function by age - Adult Males (15 measurements)
38. Linear discriminant functions for tribal groups in three zones by age - Males
39. Linear discriminant functions for tribal groups in three zones by age - Females
40. Mean value of Body Mass Index in Tribal Groups of three zones by age - Males
41. Mean value of Body Mass Index in tribal groups of three zones by age - Females
42. Details of composite index
43. Mean scores of composite index
