CONTENTS

CHAPTER I
Review on stilbenes and 1,3-dipoles

I.A. Introduction 1
I.B. Stilbene structure 2
I.C. 1,3-dipolar cycloadditions 11
I.D. Sydnone 19
I.E. Nitrones 24
I.F. Nitrile oxides 32

References 37

CHAPTER II
A novel oxidative decarboxylation-synthesis of 2-amino-1,2-dihydroisoquinoline-3(4H)-one and its amide derivatives from tetrahydroisoquinoline-3-carboxylic acid

II.A. Introduction 52
II.B. Synthesis of sydnones 52
II.C. Synthesis of 2-amino-1,2-dihydroisoquinoline-3(4H)-one 53
II.D. Synthesis of substituted phenyl acrylic acids 58
II.E. Results and discussion 62
II.F. Experimental data 62
II.G. Supporting information 72

References 88
CHAPTER III

Facile and efficient synthesis of cycloadducts from nitrones and nitrile oxides through 1,3-dipolar cycloaddition

III.A. Introduction 89

III.B. General synthetic scheme of nitrones 91

III.C. General synthetic scheme of nitrile oxides 92

III.D. Synthesis of substituted phenyl acrylic carbaldehydes 93

III.E. Synthesis of isoxazoline and isoxazolidine from nitrones 99

III.F. Synthesis of isoxazole and isoxazoline from nitrile oxides 102

III.G. Experimental data 103

III.H. Supporting information 118

References 159

CHAPTER IV

Antimicrobial activity

IV.A. Introduction 163

IV.B. Bacterial resistance against existing antibiotics 164

IV.C. Experimental procedure 166

IV.D. Antimicrobial activity of the compounds 2.13a-o (P1-P15) 169

IV.E. Antimicrobial activity of the compounds C1-C23 173

IV.F. Conclusion 180

References 181
CHAPTER V

Antioxidant activity

V.A. Introduction 184
V.B. DPPH assay 185
V.C. ABTS assay 185
V.D. Antioxidant activity of the compounds P_1-P_{15} 190
V.E. Antioxidant activity of the nitrones 191
V.F. Antioxidant activity of the compounds C_1-C_{23} 198
V.G. Conclusion 199

References 200
