The recent trend in memory theories has been changed by the work of Allan Paivio. Paivio has proposed dual code theory, indicating the verbal and nonverbal codes. Both the codes are independent as well as interrelated to each other. The orthogonality hypothesis was formulated by Dr. Allan Paivio when Banks and Flora (1978) criticized this theory. Later, the orthogonality Hypothesis has been supported by Paivio himself and te Linde in 1982. The present research was conducted in order to see the generalizability of dual code theory. The investigator wanted to find out the validity of dual code theory by presenting the material in verbal manner and picture (face) manner separately as well as in double.

With much pleasure, I deemed it necessary expressing my sincere thanks to Dr. Madhu Walia, my supervisor for her marvellous guidance, constant encouragement and constructive criticism.

My sincere thanks also go to all my subjects for their cooperation in obtaining data for this investigation.
May I also express my heartiest appreciation to all friends and college mates who have helped me and authors whose work I have consulted and quoted in this study.

Lastly, I am also thankful to Mr. Kailash for assisting me during experimentation. I am grateful to Mrs. Sunita Sharma for typing the manuscript neatly and binding it accordingly.
