Preface

Due to rapid societal changes and technological advancement, there has been an increment in the incidence of anxiety. Similarly the problem of noise pollution has also acquired new and threatening dimensions.

The present study was conducted to investigate the effect of both these factors i.e. anxiety and noise upon visual perception. Results reveal that there is no significant effect of noise and anxiety upon visual perception.

The present work has been done by the combined efforts of a number of people. I am highly grateful to my supervisor, Dr. A. Yadava, Lecturer, Department of Psychology, M.D. University, Rohtak, under whose guidance the work was planned and conducted.

I am thankful to Dr. I.S. Muhar, Head, Department of Psychology, M.D. University, Rohtak for his timely suggestions and for providing me the necessary laboratory facilities.

I am also thankful to Mr. Novrattan Sharma and Dr. Ravinder for their help and kind encouragement.

I am also highly indebted to all the students who acted as the subjects in the present investigation.

Last, but not the least I would like to thank the technical staff, Department of Psychology, M.D. University, Rohtak for their assistance during the experimentation.
