ACKNOWLEDGEMENTS

The research work which is undertaken here tries to study the fertility differentials in Kerala during its transition period on the basis of the data collected in the World Bank-UNFPA survey in three districts of Kerala in 1980. I take this opportunity of placing on record my sincere gratitude and thanks to all those persons who have helped me to complete my research work.

I am grateful to the Indian Council of Social Science Research (ICSSR) for providing me a research fellowship and the opportunity to undertake the dissertation work at Sardar Patel Institute of Economic and Social Research (SPIESR), Ahmedabad under Prof. Pravin Visaria.

I am deeply indebted to Prof. Pravin Visaria, Director, Institute of Economic Growth, Delhi University Enclave, Delhi (formerly with SPIESR, Ahmedabad and also with Gujarat Institute of Development Research, Ahmedabad) for his kind guidance, advice, encouragement and patience to complete my thesis work.

I express my sincere gratitude to the authorities of SPIESR for providing me excellent facilities during my research work. Mr. Venugopal, who provided me all the necessary secretarial help during the research work deserves a special mention.

I thank Dr. K. C. Zachariah for kindly allowing me to use the data collected in the World Bank-UNFPA Research Project, which was conducted in three districts of Kerala. I also thank late Prof. Ram Kumar, Head of the Department of Demography, Kerala University, Trivandrum for providing me excellent facilities for recoding the World Bank-UNFPA survey data from the original schedules canvassed in the survey. My special thanks are due to the students of Statistics Department, Kerala University who painstakingly assisted me during recoding of the survey data.
My husband, Mr. A. S. Dey expertly handled the data on computer and did all the statistical analysis. Without his continuous involvement and encouragement this thesis would not have been possible. No word of thanks is enough for the strenuous work carried out by him in the preparation of this thesis. I also appreciate the patience and cooperation of my sons Debarttasharan and Swastisharan during the long years of completion of this study.

Mr. A.M.K. Swami and Mr. Niraj Petigara deserve special acknowledgement for typing the manuscript and correcting the draft. My colleague, Mrs. Saroj Bhavasar of Population Research Centre, Baroda helped me in many ways right from the preparatory work of the analyses to final editing of the text. I remember with gratitude her sincere involvement and efforts.

It would be appropriate at this juncture to extend my gratitude to Mr. Rajni Patel and Mr. Arvind Mistry, who diligently assisted me while finalising the draft for this thesis.

Last but not the least I thank Mr. Mayank Ray who took pains in preparing the tables and figures as well as in setting-up of the entire thesis work on computer for the final print-out.

Ultimately, it is the Grace of the Almighty that made it possible for me to complete this work.

Ahmedabad Devamoni Dey
