Acknowledgement

First and fore-most. I thank God Almighty; it is only due to his grace and blessings that I have achieved the strength and patience to complete the research.

My humble gratitude to my teacher and guide Prof. S. R. Dave, Head, Department of Microbiology, School of Sciences, Gujarat University, without whose able guidance, I could never have achieved this. An established microbiologist by himself, his comprehensive knowledge and devotion for his subject has taught me an entirely different way of analyzing things. He always took out time from his extremely busy routine to discuss the results, solve my difficulties and suggest newer options patiently and cheerfully. It was a lifetime opportunity for me to work with him.

A great deal of encouragement and moral support came from his wife, Mrs. Smita Dave. I would be indebted to her for the strength she conferred to me.

I am very grateful to Dr. Devayani Tipre, Lecturer, Department of Microbiology, who has always helped me a lot with her valuable suggestions and loving assistance. She was a senior to look to in any difficulty and had gone many times out of her way to help me. In fact she was the master key solution to all our problems.

I thank Dr. Srinivas Murty, Research Scientist, Biogas Research Center, Sadra, for his help and moral support. His efforts and encouragement induced me to join as research fellow.

I am also thankful to Prof. Meenu Saraf, Dr. B. V. Patel and Dr. Nandita Baxi for their concern and help throughout my research.

I thank non teaching staff members of the department, Diptiben, Parikhbhai, Khandubhai, Dharamsinhbhai and Vinodbhai for their kind cooperation during my course of work in the department.

I am very grateful to Gujarat State Biotechnology Mission (GSBTM), Gandhinagar for providing me the fellowship for this research project.

My special thanks to Dr. Neepa Pandhi, Lecturer, Virani Science College, Rajkot, who made arrangement of samples from Rajkot.

I am also thankful to Mr. Dinesh Patel, Hard Chrome Plating Industry, Vatva, for providing me industrial effluent for the research work.

I thank to Mr. Dhiren Gandhi director, Siddhi group of companies for his valuable suggestions and for providing information about chrome plating industries.
I can not forget to thank my Ph.D. colleagues Dr. Tejas Shah, Dr. Kajal Gupta, Rashmi, Parveen didi, Riddhi, Mitesh, Bhargav, Dipali, Fuad bhai, and all M.Phil colleagues specially Paresh, Maitry, Vaishali and Dhara who created friendly work environment and working with them has always been a pleasure.

I am also thankful to Naresh bhai for his valuable support through out my research work.

There are certain relationships, which are beyond the scope of words. My bond with my friend Ishita is such that it requires no words. She was always present when needed, a friend like her is difficult to find, indeed a friend in need is friend in deed. I just thank for being with me through all ups and downs.

How do I thank my husband Pulin and son Dwij: They have been the constant source of my motivation and inspiration. Pulin has been my pillar of strength in all situations. It is only due to his patience and persistence that I achieved this goal in my life. It is my son Dwij who I specially thank since he had to forgo his mother’s care and company from the very beginning of his life.

A special note of thanks to my in-laws, it is with their care, concern and great deal of support during my research work that I have been able to achieve my goal.

My parents have been my true strength and it is with their blessing and immense support, that I could complete my research work. I also extend my heart felt thanks to Chintan, Pranav, Deval, Vipul bhai and Hetal bhabhi, they all have been extremely helpful and supportive.

Last but not the least. I wish to thank my well wishers, friends and all those who have helped me directly and indirectly in my work.

My sincere thanks to all of them,

Viral Y. Shukla,

Ahmedabad
