5.3a: Soil organic carbon (SOC) content of soil samples collected from the study site at a depth of 0 – 10 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.3b: Soil organic carbon (SOC) content of soil samples collected from the study site at a depth of 10 – 20 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.3c: Soil organic carbon (SOC) content of soil samples collected from the study site at a depth of 20 – 30 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.4a: Total nitrogen (TON) content of soil samples collected from the study site at a depth of 0 – 10 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.4b: Total nitrogen (TON) content of soil samples collected from the study site at a depth of 10 – 20 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.4c: Total nitrogen (TON) content of soil samples collected from the study site at a depth of 20 – 30 cm. Data represented are an average of two years of sampling from January 2008 to November 2009.
Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.5a: Available phosphorous content of soil samples collected from the study site at a depth of 0 – 10 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.5b: Available phosphorous content of soil samples collected from the study site at a depth of 10 – 20 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.5c: Available phosphorous content of soil samples collected from the study site at a depth of 20 – 30 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.6a: Exchangeable potassium content of soil samples collected from the study site at a depth of 0 – 10 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.6b: Exchangeable potassium content of soil samples collected from the study site at a depth of 10 – 20 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.6c: Exchangeable potassium content of soil samples collected from the study site at a depth of 20 – 30 cm. Data represented are an average of two years of sampling from January 2008 to November 2009.
Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.7a: Microbial biomass carbon (MBC) of soil measured at a depth of 0 – 10 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.7b: Microbial biomass carbon (MBC) of soil measured at a depth of 10 – 20 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.7c: Microbial biomass carbon (MBC) of soil measured at a depth of 20 – 30 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.8a: Microbial biomass nitrogen (MBN) of soil measured at a depth of 0 – 10 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.8b: Microbial biomass nitrogen (MBN) of soil measured at a depth of 10 – 20 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.8c: Microbial biomass nitrogen (MBN) of soil measured at a depth of 20 – 30 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected
from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.9a: Microbial biomass phosphorous (MBP) of soil measured at a depth of 0 – 10 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.9b: Microbial biomass phosphorous (MBP) of soil measured at a depth of 10 – 20 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.9c: Microbial biomass phosphorous (MBP) of soil measured at a depth of 20 – 30 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.10a: Respiration of soil measured at a depth of 0 – 10 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.10b: Respiration of soil measured at a depth of 10 – 20 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.10c: Respiration of soil measured at a depth of 20 – 30 cm. Data represented are an average of two years of sampling from January 2008 to November 2009. Samples were collected from six villages
viz., Hari, Hija, Mudang Tage (MT), Dutta (DTA), Bulla (BUA) and Bamin Michi (BM).

5.11: Relationship among Microbial Biomass Carbon (MBC), Nitrogen (MBN) and Phosphorus (MBP).

5.12: Relationship among Soil Organic Carbon (SOC) and Microbial Biomass Carbon (MBC).

5.13: Relationship among Total Kjeldhal Nitrogen (TKN) and Microbial Biomass Nitrogen (MBN) in the study site.

5.14: Relationship among Available Phosphorous and Microbial Biomass Phosphorus (MBP) in the study site.

5.15: Relationship among Soil Organic Carbon (SOC) and Soil Respiration (SR) in the study site. (Where, SR is expressed in mg CO₂ m⁻² hr⁻¹ and SOC in percentage)

6.1: Diurnal variation of methane emission in all the villages under study site

6.2: Temperature vs SMC vs CH4

6.3: WHC vs SMC vs CH4

6.4: SOC vs SR vs CH4

6.5: SOC vs MBC vS CH4

6.6: MBP vs Available P vs CH4

7.1: The different pools of Soil Organic Carbon as defined by RothC (after Coleman and Jenkinson, 1990)

7.2: Changes in Soil Organic Carbon over a period of 41 years from 1970–2010

7.3: Carbon dioxide flux from agricultural fields over a period of 41 years from 1970–2010

7.4: Comparison between the measured and modelled values of soil organic carbon over a period of 41 years from 1970 to 2010.
