ACKNOWLEDGEMENTS

The author wishes to express her grateful thanks to the Directors of Ionospheric and magnetic observatories for kindly sending regularly their data publications and to the Directors of the World Data Centres in U.S.A., Great Britain, Denmark and Japan for promptly supplying the microfilm and paper-print copies of required data.

The author is extremely grateful to Prof. Dr. K. Rawer, Director, Arbeitsgruppe für Physikalische Weltraumforschung, Freiburg (FRG) for generously helping in our project on rocket experiments, presenting the Impedance Probe payloads and for helpful suggestions in the implementation of the project. I am also grateful to Dr. R. Kist and the research engineer Mr. W. Ott, both belonging to Prof. Rawer's group for their cooperation in the work on Impedance probe.

Dr. K. G. Jani and Mr. B. M. Patel actively participated in carrying out the ground and telemetry tests and in the integration of the payload. My thanks are due to them for their valuable assistance.
I am also grateful to Prof. P. D. Pathak, Head of the Department of Physics for giving necessary facilities and encouragement to carry out the research work.

Finally I express my deep sense of gratitude and indebtedness to Dr. K. M. Kotadia for taking keen interest and guiding the research work presented in this thesis leading to the Ph.D. degree. His constant supervision and lively discussions were a source of inspiration and I have learnt a great deal of science from him.

Last, but not the least, I should acknowledge with many thanks the financial support given by the Council of Scientific and Industrial Research, Government of India, New Delhi in the form of Junior and Senior Research Fellowship grants to help carry out the scientific investigations.

(N.K. PARikh)
