Acknowledgements

Any research work involves a number of experiments, instrumentation, drugs materials, tested and untested/untried ideas and concepts which cannot be carried out without the goodwill, help and co-operation of a number of institutions and people who contribute to this work. Culmination of the work is the right time to thank them all.

"You can want to do the right things
and you can even want to do it for the right reasons.
But if you don’t have the right guidance you can never hit a right target."

Words cannot express my deep sense of gratitude to my mentor and research guide Dr. Ramesh K. Goyal, M. Sc. (Med), Ph. D., F.I.C., F.I.C.N., FAMS, F.I.R.S., F.I.A.C.S., Department of Pharmacology, L. M. College of Pharmacy, for his constant untiring guidance, invaluable suggestions, constructive criticism, encouragement and advice during the course of this work. Words could not be adequate to express the crucial nature of interactive help I have received from his learned personality. Many a times we heard “THINK UNTINKABLE” and forgot, he practiced it in his life. He visualized before a couple of decay that Diabetes and Cardiovascular disorders would be the most burden for the society, and started to do something novel than the others. I learnt from him some basic principles of life, commitment towards work, simplicity, politeness and handling of nos of things at a time successfully.

I would like to sincerely thank Prof. Anita Mehta, Ph.D., Principal, L. M. College of Pharmacy for providing all infrastructure and resources as and when needed to complete my research work. She always conducted positive energy and inspiration to work in me and helped me out during the difficult times as a kind counselor. I would like to thank Dr. Sunita Goswami, Department of Pharmacology, L. M. College of Pharmacy for their support and constructive criticisms during my research work.
I take this opportunity to thank Prof. Avani F. Amin, ex-principal and I/c Director, Institute of Pharmacy, Nirma University. She constantly encouraged me to undertake my research work efficiently during my difficult times. Also, the freedom given by her to the faculty members was itself a great inspiration to work at the Institute. I would also express my deep gratitude to Prof. Manjunath Ghathe, Director, Institute of Pharmacy, Nirma University for providing all required facilities for my research work. At this juncture, I would also express my sincere heartfelt thanks to all the faculty members of Institute of Pharmacy, Nirma University for their support and cooperation.

I would also like to acknowledge the support provided by the management of Nirma University in the form minor research grants to carry out part of my research work.

A special thanks to Bhoomika and Mayur for their patience, constant inspiration and a great helping hand in all the endeavors undertaken during my research tenure. And of course I could not forget to thank all of my students especially Saurabh, Pratik, Deepak, Ph.D scholar Deepak Khatri and others for their help and the enjoyable moments which I had with them. Without them, it was not possible to reach to this level. I thank Dipeshbhai and Dhartiben for their help and support for my experimental work. I also thank Rajubah for help and co-operation.

This work would have had been an uphill task, were it not for the patience, understanding and caring shown by my husband Dr. Vikas, sister, brother, my dear parents and parents-in-law. A special thanks is due to my dearest daughter Dia who had been a constant inspiration for me to complete my work as early as possible.

Nothing is possible without the blessings and the graces of the Almighty. His wish will be done.

March 2013
