LIST OF FIGURES

Fig 1: Heat penetration characteristics and Fo value of tuna 105
In oil processed to Fo 5.

Fig 2: Heat penetration characteristics and cook value of tuna 105
in oil processed to Fo 5.

Fig 3: Heat penetration characteristics and Fo value of tuna 108
in oil processed to Fo 7.

Fig 4: Heat penetration characteristics and cook value of tuna 108
in oil processed to Fo 7.

Fig 5: Heat penetration characteristics and Fo value of tuna 111
Oil processed to Fo 10.

Fig 6: Heat penetration characteristics and cook value of tuna 111
in oil processed to Fo 10.

Fig 7: Heat penetration characteristics of tuna in oil processed 116
to Fo 10 with 2 rpm.

Fig 8: Heat penetration characteristics and cook value of tuna 116
in oil processed to Fo 10 with 2 rpm.

Fig 9: Heat penetration characteristics of tuna in oil processed 119
to Fo 10 with 4 rpm.
Fig 10: Heat penetration characteristics and cook value of Tuna in oil processed to Fo 10 with 4 rpm.

Fig 11: Heat penetration characteristics of tuna in oil processed to Fo 10 with 6 rpm.

Fig 12: Heat penetration characteristics and cook value of Tuna in oil processed to Fo 10 with 6 rpm.

Fig 13: Heat penetration characteristics and Fo value of tuna in brine processed to Fo 10.

Fig 14: Heat penetration characteristics and cook value of Tuna in brine processed to Fo 10.

Fig 15: Heat penetration characteristics and Fo value of tuna in curry processed to Fo 10.

Fig 16: Heat penetration characteristics and cook value of Tuna in curry processed to Fo 10.

Fig 17: Heat penetration characteristics and Fo value of mackerel in oil processed to Fo 5.

Fig 18: Heat penetration characteristics and cook value of Mackerel in oil processed to Fo 5.

Fig 19: Heat penetration characteristics and Fo value of Mackerel in oil processed to Fo 7.
Fig 20: Heat penetration characteristics and cook value of Mackerel in oil processed to Fo 7.

Fig 21: Heat penetration characteristics and Fo value of Mackerel in oil processed to Fo 9.

Fig 22: Heat penetration characteristics and cook value of Mackerel in oil processed to Fo 9.

Fig 23: Heat penetration characteristics of mackerel in oil processed to Fo 10 with 2 rpm.

Fig 24: Heat penetration characteristics and cook value of Mackerel in oil processed to Fo 10 with 2 rpm.

Fig 25: Heat penetration characteristics of mackerel in oil processed to Fo 10 with 4 rpm.

Fig 26: Heat penetration characteristics and cook value of Mackerel in oil processed to Fo 10 with 4 rpm.

Fig 27: Heat penetration characteristics of mackerel in oil processed to Fo 10 with 6 rpm.

Fig 28: Heat penetration characteristics and cook value of Mackerel in oil processed to Fo 10 with 6 rpm.

Fig 29: Heat penetration characteristics and Fo value of mackerel in brine processed to Fo 9.
Fig 30: Heat penetration characteristics and cook value of Mackerel in brine processed to Fo 9.

Fig 31: Heat penetration characteristics and Fo value of Mackerel in curry processed to Fo 9.

Fig 32: Heat penetration characteristics and cook value of Mackerel in curry processed to Fo 9.

Fig 33: Changes in TBA value of tuna in oil during storage.

Fig 34: Changes in TBA value of tuna in brine during storage.

Fig 35: Changes in TBA value of tuna in curry during storage.

Fig 36: Changes in TBA value of mackerel in oil during storage.

Fig 37: Changes in TBA value of mackerel in brine during storage.

Fig 38: Changes in TBA value of mackerel in curry during storage.

Fig 39: Changes in pH value of tuna in oil during storage.

Fig 40: Changes in pH value of tuna in brine during storage.

Fig 41: Changes in pH value of tuna in curry during storage.

Fig 42: Changes in pH value of mackerel in oil during storage.

Fig 43: Changes in pH value of mackerel in brine during storage.
Fig-44: Changes in pH value of mackerel in curry during storage. 170

Fig-45: Changes in sensory score of tuna in oil during storage. 172

Fig-46: Changes in sensory score of tuna in brine during storage. 173

Fig-47: Changes in sensory score of tuna in curry during storage. 173

Fig-48: Changes in sensory score of mackerel in oil during storage. 174

Fig-49: Changes in sensory score of mackerel in brine during storage. 175

Fig-50: Changes in sensory score of mackerel in brine during storage. 175

Fig-51: Hardness I and hardness II of thermally processed Tuna in oil during storage. 177

Fig-52: Hardness I and hardness II of thermally processed Tuna in brine during storage. 178

Fig-53: Hardness I and hardness II of thermally processed Tuna in brine during storage. 178

Fig-54: Cohesiveness of thermally processed tuna in oil during storage. 179
Fig-55: Cohesiveness of thermally processed tuna in brine during storage.

Fig-56: Cohesiveness of thermally processed tuna in curry during storage.

Fig-57: Springiness of thermally processed tuna in oil during storage.

Fig-58: Springiness of thermally processed tuna in brine during storage.

Fig-59: Springiness of thermally processed tuna in curry during storage.

Fig-60: Hardness I and hardness II of thermally processed Mackerel in oil during storage.

Fig-61: Hardness I and hardness II of thermally processed Mackerel in brine during storage.

Fig-62: Hardness I and hardness II of thermally processed mackerel in curry during storage.

Fig-63: Cohesiveness of thermally processed mackerel in oil during storage.

Fig-64: Cohesiveness of thermally processed mackerel in brine during storage.
Fig-65: Cohesiveness of thermally processed mackerel in curry during storage.

Fig-66: Springiness of thermally processed mackerel in oil during storage.

Fig-67: Springiness of thermally processed mackerel in brine during storage.
