LIST OF TABLES

1.1 Water analysis
1.2 Calcium retaining power of chemicals
2.1 Water analysis
2.2 Corrosion of Aluminium in Supply water
2.3 Effect of Oxidizing Agents on Corrosion of Aluminium in supply water (stagnant condition)
2.4 Effect of Chlorine, Bromine and Iodine waters on corrosion of Aluminium in supply water
2.5 Effect of colloids on corrosion of Aluminium in supply water (stagnant condition)
2.6 Effect of Amines on corrosion of Aluminium in supply water (stagnant condition)
2.7 Effect of Oxidizing Agents on Corrosion of Aluminium in supply water (slowly moving condition)
2.8 Corrosion of Aluminium in mixture of salts and effect of copper ions (stagnant condition)
2.9 Effect of copper ions on corrosion of Aluminium in slowly moving water
2.10 Variation in potential with time
2.11 Galvanostatic measurements
3.1 Maximum corrosion (mild steel)
3.2 Chloride content of the atmosphere
3.3 Summary of data of Atmospheric Corrosion (mild steel)
3.4 Maximum corrosion (zinc)
