ACKNOWLEDGEMENTS

I must first thank Professor Bhopatkar, my guide whose eye for precision and detail helped point out several omissions and errors.

Professor E. V. Chitnis, Programme Manager of the SITE Project at the Space Applications Centre provided me with the encouragement to persist with the study and, with permission to use the data for a doctoral dissertation.

Professor Everett Rogers spent several nights reading the draft which I finalised as Visiting Scholar at the Institute for Communication Research, Stanford University.

Mr. Dalpat Sarupria handled all the computer work, Ms. Rashida Rangwala helped in data collection and analysis preparation, Mr. Prakash Suthar was the resident participant observer in the study village, Ms. Ila Patel was an invaluable liaison, and Mrs. Omana Raghavan handled the typing.

To all these supportive persons, and to the Space Applications Centre, I owe a debt of thanks.
