LIST OF FIGURES

Chapter 2

Fig. 2.1  Location map of Kottayam District 8
Fig. 2.2  Physiographic divisions of Kottayam District 10
Fig. 2.3  Land use map of Kottayam District 11
Fig. 2.4  Soil series map of Kottayam District 12

Chapter 3

Fig. 3.1  Variations in SOC % under multiple land use category 28
Fig. 3.2  PCM and MBC concentrations under multiple land use category 28
Fig. 3.3  C source and sink capacity of various land uses 29
Fig. 3.4  Global warming potential of different land uses 31
Fig. 3.5  SOC concentration in different soil series 32
Fig. 3.6  PCM and MBC concentrations in different soil series 33
Fig. 3.7  Source and sink capacity of various soil series 33
Fig. 3.8  Global warming potential of different soil series 35
Fig. 3.9  SOC % of different series under different land use categories 35
Fig. 3.10 C turnover of soil series under different land use categories 37
Fig. 3.11 Global warming potential of various land uses under different soil series 38
Fig. 3.12 Carbon stock change variation (2009 - 2012) 40

Chapter 4

Case study 1

Fig. 4.1.1 Land use map of Kottayam District 49
Fig. 4.1.2 Soil series map of Kottayam District 49
Fig. 4.1.3  Map showing the specific study area (Kottappuaram soil series) in Kottayam district  50
Fig. 4.1.4  Gridded map of Kottappuram soil series  50
Fig. 4.1.5  Land use categories  51
Fig. 4.1.6  Mean pH values of different land use categories  53
Fig. 4.1.7  Average SOC values of different land use categories  54
Fig. 4.1.8  Vertical distribution of SOC (0-30cm) in different land use categories  55
Fig. 4.1.9  Percentage contributions of $C_L$ and $C_{NL}$ to SOC under different land use categories  57
Fig. 4.1.10  FTIR spectra showing labile and non-labile C functional groups  59
Fig. 4.1.11  POC values of different land use categories  60
Fig. 4.1.12  MBC values of different land use categories  62
Fig. 4.1.13  Average PCM values of different land use categories  63
Fig. 4.1.14  Proportion of water stable aggregates  66
Fig. 4.1.15  Variation in glomalin Concentration  67
Fig. 4.1.16  Global warming potential of different land use categories  68
Fig. 4.1.17  Carbon source and sink capacity of different land uses categories  69

Case study 2

Fig. 4.2.1  Soil carbon storage of different plantations  78
Fig. 4.2.2  Carbon pool index of different plantations  80
Fig. 4.2.3  Vertical distribution of SOC in different plantations  81
Fig. 4.2.4  Percentage contributions of carbon counter parts ($C_L$ and $C_{NL}$) to total SOC  83
Fig. 4.2.5  NMR spectra of C functional groups under different plantations  84
Fig. 4.2.6  POC values of different plantation categories  85
Fig. 4.2.7  MBC in different plantation categories  86
Fig. 4.2.8  PCM in different plantation categories  87
Case study 3

Fig. 4.3.2 SOC concentrations of different forest sites
Fig. 4.3.3 Storage profile of SOC (0-30cm)
Fig. 4.3.4 Percentage contributions of $C_L$ and $C_{NL}$ to SOC
Fig. 4.3.5 NMR spectra showing the C functional groups of different forest soils
Fig. 4.3.6 POC concentrations of different forest sites
Fig. 4.3.7 Vertical distribution of POC in different forest sites
Fig. 4.3.8 MBC Concentration in different forest sites
Fig. 4.3.9 Vertical distribution of MBC in different forest sites
Fig. 4.3.10 PCM Concentration in different forest sites
Fig. 4.3.11 Depth wise distribution of PCM in different forest sites
Fig. 4.3.12 Depth wise distribution of WSA in different forest sites
Fig. 4.3.13 Glomalin concentrations in different forest sites
Fig. 4.3.14 Global warming potential of different forest sites
Fig. 4.3.15 Source sink capacity and C pool vulnerability of different forest sites

Case study 4

Fig. 4.4.1 Location map and the sampling sites of Vagamon grassland.
Fig. 4.4.2 Land use categories
Fig. 4.4.3 Variations of SOC concentration in different sites
Fig. 4.4.4 Vertical distribution of SOC
Fig. 4.4.5 Proportions of labile and non-labile carbon counter parts
Chapter 5

Experimental study 1

Fig. 5.1.1 Variations in SOC under different conditions 151
Fig. 5.1.2 Variations in POC under different conditions 152
Fig. 5.1.3 Variations in MBC under different conditions 153
Fig. 5.1.4 Variations in PCM under different conditions 154
Fig. 5.1.5 Proportion of labile and non-labile C fractions 156
Fig. 5.1.6 IR spectra of soil under different trials 158
Fig. 5.1.7 Proportion of water stable aggregates (WSA %) under different trials 159
Fig. 5.1.8 SEM image showing soil aggregation under different trials 160
Fig. 5.1.9 EDS spectra 161
Fig. 5.1.10 Status of global warming potential of different trials 162
Fig. 5.1.11 Status C source/Sink and turnover under various trials 163
Fig. 5.1.12 Experimental growth trials 167

Experimental study 2

Fig. 5.2.1 Variations in SOC concentrations under different trials 173
Fig. 5.2.2 Proportion of carbon labile and non-labile fractions 174
Fig. 5.2.3  Carbon pool index (CPI) 175
Fig. 5.2.4  NMR Spectra showing the carbon functional groups in the experimental soil 175
Fig. 5.2.5  POC concentration under different trials 176
Fig. 5.2.6  MBC concentration under different trials 178
Fig. 5.2.7  PCM concentration under different trials 179
Fig. 5.2.8  Global warming potential under different trials 180
Fig. 5.2.9  WSA proportion under different trials 181
Fig. 5.2.10 Glomalin concentration under different trials 181
Fig. 5.2.11 Carbon source and sink capacity under different trials 183
Fig. 5.2.12 Variation in biomass carbon content in trial plants 184
Fig. 5.2.13 Plant biomass 184
Fig. 5.2.14 CO₂ equivalent C sequestered by different trials 185
