CONTENTS

Introduction .................................. 1
Historical .................................. 5
Materials and Methods ......................... 27
Experimental findings: ........................
A. Growth data ................................ 45
B. Growth and development of shoot apex .... 56
C. Growth period and photothermic quantum .... 78
D. Role of ascorbic acid in growth and development .... 85
E. Role of deoxyribonucleic acid in growth and development of the shoot apex .... 94
General discussion .............................. 97
Summary ...................................... 112
References .................................... 117
Appendix ...................................... 155
