ACKNOWLEDGEMENTS

The author expresses his deep gratitude towards Prof. P.C. Vaidya who initiated him to scientific research, suggested the topic of the thesis and supervised the work.

He thanks to the Department of Education, Gujarat State, and the Gujarat University for the awards of research scholarships for the periods 1962-65 and 1965-66, respectively. His thanks are also due to the University Grants Commission, New Delhi, which supported the work during 1966-67 by awarding a junior research fellowship.

There was a delay in submitting the thesis because, during 1967-69, the author visited the Department of Theoretical Physics (S.G.S., A.N.U., Canberra) as a research scholar. However, the necessary extension for submitting the thesis was granted by the authorities of the Gujarat University, to whom the thanks are extended.

Besides, he is pleased to thank his friends Mr. R.B. Patel for checking the manuscript and Mr. N.K. Soni for excellent typing.
