ACKNOWLEDGEMENT

I express my deepest and most sincere feelings of gratitude to Dr. D. J. Tody, who not only guided me thoroughly for my present thesis but always heartily encouraged me like a true friend, philosopher and guide. I am grateful to I.C.S.S.R. for giving me the study-grants as well as the computer-grant. But for these grants the study would not have been completed.

How can I forget Prof. B.V.S.N. Murthy and M.F. Shah of Sardar Patel Institute who shouldered the responsibility of computer programming? I do express my sense of gratitude towards them without whose kind cooperation all these could have been a very difficult job.

I also acknowledge the obligations of the staff members of Sardar Patel Institute of Economic and Social Research including the Director, the Administrative Officer, Librarian and others for extending cooperation to me to finish my job. I may consider ungrateful if I do not thank Prof. V.N. Vrividhi who also helped me a lot. I am specially grateful to Prof. Geetaben and D.J. Varia for help.

The least but not least is the opportunity for me to express my thanks to my family members who shared my domestic responsibilities and always encouraged me with warmth and affection. I am also thankful to Shri Umakrishnan for typing and Shri M.F. Jani for helping.

Again I am fully grateful to my Guide Dr. D. J. Tody but for whose guidance the present thesis could not have seen the light of the day.
