ACKNOWLEDGEMENT

The present study is the outcome of my tenure as U.G.C. Teacher Fellow at Department of Economics, University School of Social Sciences, Gujarat University, Ahmedabad during June 1979 to June 1983. I am extremely grateful to the Department of Economics, especially Professor M.P. Bhatt, Professor and Head of the Economics Department and Director, University School of Social Sciences for providing me this opportunity of working at the Department as U.G.C. Teacher Fellow. Prof. Bhatt took keen interest in the progress of my work and encouraged me to discuss my research problem with him and in Faculty Seminars. During my tenure of fellowship I received all institutional facilities and intellectual support and encouragement from Professor Bhatt and other Faculty members of the Department. I take this opportunity to thank them. The management of my college, viz., Shri C.D.Patel Mahavidya Mandal, TALOD has also played a very helpful role by granting me permission for undertaking this research work under the U.G.C. Teacher Fellowship Scheme and sparing me for the period of my research work. In particular, I am grateful to Sri Shantubhai C. Patel, M.P. and Secretary of C.D. Patel Mahavidya Mandal and to the Principal of my College Dr. P.K. Mehta. Frequent
discussions with them enhanced my knowledge about the problem at hand and several ideas emerged which contributed to the enrichment of my study.

The present study owes much to Dr. B.B. Jani, Reader in Department of Economics, who was my research guide in early stages introduced me to the fascinating area of regional planning techniques and their application to concrete operational situations. I take this opportunity to express my gratitude to him. On his departure to Zambia on teaching assignment at University of Zambia, Professor V.P. Bharadwaj agreed to be my research guide. But for his sincere concern for me and painstaking care at all stages of progress of this work, it was beyond my reach to complete this study. I owe a lot to him for the same and I am deeply grateful to him. I am also thankful to Prof. M.S. Trivedi, former visiting U.G.C. Professor, at the Department and Director of Sardar Patel Institute of Economic and Social Research, Ahmedabad who from time to time took interest in my work and encouraged me to go for rigorous analysis and suggest operationally viable schemes.

I shall be failing in my duty if I do not express my sincere thanks to Dr. C.H. Thaker and Prof. P.C. Vora who gave their valuable time for frequent discussions and consultations on earlier drafts of the thesis. Similarly, Dr. V.K. Chavda and Dr. P.K. Dave took interest in the
progress of my work and I gained much from discussions with them. I also gained considerably from the experience and knowledge of other colleague Teacher Fellows at the Department. I am thankful to all of them. However, I will be failing in my duty if I do not specifically mention the help of Professor L.R. Mehta and Professor P.R. Shah in terms of various useful suggestions. My friend and colleague at the College, Prof. C.M. Shah and my friend Shri H.D. Budhabhatti, have helped me at various stages of primary and secondary data collection and analysis. I express my sense of gratitude to them.

The present work owes its present form to willing cooperation and interest taken by my cartographer friend Shri G.D. Patel and typist Smt. Kanchanben Jansari who were always ready to work for me. I take this opportunity to thank them.

Last but not the least, I wish to mention my sincere and grateful thanks to my family members who patiently and gladly shared the pleasures and pains of my research work.

J. M. SHAH
U.G.C. Teacher Fellow
Department of Economics
School of Social Sciences
Gujarat University
Ahmedabad 380 009.
