ACKNOWLEDGMENT

In uncovering hither to the latent areas concerning the physiological aspects of some vegetable crops presented in this thesis, I express my deep sense of gratitude, heartfelt thanks and highly veneration to Dr. C.P. Saxena, Department of Botany, Gujarat University, Ahmedabad. But for his constant keen interest, inspiring suggestions, constructive criticism and dispassionate and detached analysis in solving the intricate problems, the endeavour would have not been so successful.

My all regards and praise to Dr. C.K. Shah, Reader and Head, Botany Department, Gujarat University, Ahmedabad, who extended me all out necessary facilities during the period of investigation.

I will be failing in my duties if do not express my sincere thanks to Dr. V.S. Verma and Dr. Mahesh Pal, Agricultural University, Kanpur, who so assiduously computed the data. I show my worthy thanks to Dr. R.K. Singh and Dr. Luther, Hisar Agricultural University, Haryana for their valuable help in cytological work. I also thank Mr. V.C. Shah, Ph.D., Ahmedabad, for the SEM work.

My parents and my husband, Mr. S.P. Singh and uncle Dr. R.T. Singh had been a great source of encouragement in pursuing this high realm of learning all these years. Inspite of many family constraints their regard and value for sustaining my academic interest was infact an invaluable gift which I shall
cherish throughout my life. My love and thanks are also due to my brother and sister for their encouragement and moral support.
I am immensely grateful to Mr. B.N. Tripathi who has always inspired me to work enthusiastically.

In the last, but not the least, I am thankful to my colleagues Mr. Gurdev Singh, Mr. T. Fakreasih, Mr. D.V.N. Prasad and Miss P.K. Garg and Mrs. Neena Pandey with whom I worked with essence of friendship and fraternity all these years.

Lastly I am thankful to all those who helped me directly or indirectly during my stay here.

Ahmedabad
