Acknowledgements

The real credit for the materialization and configuration of this thesis ultimately should go to Dr O P Saxena, the Research Guide, for he proposed a problem pertinent to present scientific scenario, especially to the Indian agricultural one, for his attentive and magnanimous attitude, right from the first day, to understand and analyze the obstacles which any researcher would face. Constant encouragements from him can not be overlooked. The laboratory and other facilities provided by Prof A B Vora, the Head of Botany Department, are recognized humbly.

The Management and the Principal, C U Shah Science College, Ahmedabad, and the Head of Biochemistry Department, Dr V Prakash, as well as the senior colleagues deserve many thanks for being very helpful and considerate throughout the studies.

While too numerous to mention individually, many friends and colleagues have helped in many different ways throughout the experimentation and production processes to all of whom I express my sincere gratitude. Particularly, Anil Pandya - a colleague and a friend, is unforgettable for being helpful at each and every stage.

I do not have words to express my feelings for the inspiration, motivation, and the showers of blessings, from my parents, other family members and parents-in-laws. A sincere thank must be given to my brother Sharad for his art work.

A mention must be made of my wife, Neeta Thanki, an efficient colleague and the best critic, who helped and assisted me during experimentation and in computerizing the data.

Finally, I wish to acknowledge the financial support provided by the University Grants Commission as the JRF Scholarship.
