ACKNOWLEDGEMENTS

Prof. Atul Sarma initiated me into this area. Discussions with him always brought clarity to the hazy sketches of my analytical structure. He was a constant source of guidance and moral support for which I am highly thankful to him.

The base provided by Prof. R. Radhakrishna in the empirical techniques of economic analysis helped me a great deal in laying the methodological foundations of the study. I freely encroached upon Prof. G.V.S.N. Murty's time for econometric clarifications. In fact, his suggestions helped me in 'balancing the budgets' properly.

Among my colleagues, Kawal Bam helped me at the time of constructing the commodity vector and Surjit Singh while planning some of the tables and the paper I presented at the 7th Input-Output Conference. Dinesh Awasthi was kind enough to go through my first draft and suggest numerous improvements. Rakesh Basant and Jeemol encouraged me to 'test market' parts of this work to the 'small seminars group' because of which I would make some important modifications. Anil Gumber, Himal Singh, Ritesh Rai and Amita went out of their way to help me in the final stages of this work. I was immensely benefitted by Dr. P.M. Pillai's almost constant nagging to finish this work as fast as possible.
While Shri Y.V. Pantulu painstakingly developed some of the most complicated computer programmes, it was B.C. Matida's efficient and fast programming skills which enabled me to meet the deadline. Shri K.S. Reddy also helped at various stages of the work.

In addition, I had benefited from a large number of individuals and institutions. In particular, I sincerely acknowledge the Junior Research Fellowship provided by the Indian Council of Social Science Research for little over three and a half years and the administrative support provided by Sardar Patel Institute of Economic and Social Research, without which I could not have completed this work.

Shri T. Prabhakaran and Shri K.P. Satheesan performed the typing work efficiently.

I am thankful to all of them.

V.B. TULASIDHAR
