2 Crystal growth and characterization

2.1 Crystal growth

2.2 Czochralski technique

2.2.1 Fundamental consideration for growth
2.2.2 Crystal growth system

2.3 Characterization

2.3.1 Melting behavior
2.3.2 Structure
2.3.3 Orientation
2.3.4 Optical transmission
2.3.5 Luminescence
2.3.6 Composition

3 Theoretical calculations

3.1 Structural refinement

3.2 First principles calculation of electronic properties

3.2.1 Density functional theory
3.2.2 Local density approximation
3.2.3 Generalized gradient approximation
3.2.4 Full potential linearized augmented plane wave method

3.3 Linear optical properties

3.4 Wien2k code

4 Crystal growth of Lead Molybdate and effect of non-stoichiometry

4.1 Crystal Growth

4.1.1 Material preparation
4.1.2 Modeling the growth
4.1.3 Cracking

4.2 Sources of crystal coloration

4.2.1 Material purity

4.2.2 Non-stoichiometry

4.2.3 Annealing

4.2.4 Discussion

4.3 First principles calculations of electronic and optical properties

4.4 Photoluminescence

4.4.1 Dependence on stoichiometric composition

4.4.2 Life time measurements

4.5 Summary

5 Growth and optical properties of barium tungstate

5.1 Crystal growth and characterization

5.1.1 Growth

5.1.2 Structural characterization

5.1.3 Transmission and annealing effects

5.2 Photoluminescence studies

5.2.1 Emission spectra

5.2.2 Life time

5.2.3 Annealing effects

5.2.4 Discussion

5.3 Calculation of electronic and optical properties

5.4 Conclusions

6 Growth and characterization of sodium bismuth double tungstate crystal

6.1 Crystal growth

6.1.1 Effect of starting charge

6.1.2 X-ray diffraction analysis
6.13 Differential thermal analysis 151
6.14 Discussion 152

6.1 Optical transmission 154
6.1.5 Radiation effects 154
6.1.6 Effect of annealing 159
6.1.7 Discussion 160

6.2 Theoretical calculations of electronic and optical properties 161

6.3 Conclusion 167

7 Summary and conclusion 169-179
