

Contents

1	Introduction	1
1.1	Electron Transfer Theories	2
1.2	Experimental overview	4
1.3	Preliminary terms and concepts	5
1.3.1	Fermi Wavelength	6
1.3.2	Momentum relaxation length	6
1.3.3	Phase relaxation length	6
1.3.4	Molecule-electrode coupling	7
1.3.5	Relative position of Fermi surface	8
1.3.6	Electrostatic potential profile inside the molecule	8
1.3.7	Electronic structure of the molecule	9
1.4	Mechanisms of electron transport	9
1.4.1	Ballistic regime	9
1.4.2	Diffusive regime	10
1.4.3	Classical regime	10
1.5	Brief overview of theoretical tools	11
1.5.1	Lippman-Schwinger equation	11
1.5.2	Landauer-Buttiker Formalism	11
1.5.3	Ratner-Mujica Formulations	12
1.5.4	NEGF: Caroli's formula	13
1.5.5	Handling Interactions	14
1.6	Electron transfer and it's relevance in electrochemical environment .	15
1.6.1	Bridge mediated electron transfer	15
1.6.2	Electrochemical coulomb staircase charging	16
1.6.3	Electrocatalysis	17

1.7	Organization of Thesis	17
2	Electron tunneling between two electrodes mediated by a molecular wire containing a redox center	19
2.1	Introduction	19
2.2	Model Hamiltonian, Green's functions and current density	22
2.3	Results and discussions	29
2.4	Conclusions	33
3	Electron Transfer rate between a electrode and a bridged redox	35
3.1	Introduction	35
3.2	Model and Calculation	36
3.3	Results and Discussion	42
3.4	conclusion	46
4	Electron Transfer Reaction Through an Adsorbed Layer	48
4.1	Introduction	48
4.2	Model Hamiltonian	49
4.3	Calculation of current	51
	4.3.1 Estimation of Coherent Potential	52
	4.3.2 Current expression in terms of re-organisation energies and overpotentials	55
4.4	Numerical Results and Discussions	57
4.5	Summary and Conclusions	69
5	Conclusion	71
