## LIST OF TABLES

**Table 4.1:** The molecular parameters of the solute-solvent system.  

**Table 4.2:** Refractive index of neat liquid and liquid mixtures measured experimentally.  

**Table 5.1:** The optimized geometrical parameters- bond length, energy and dipole moment of DMSO, dimer state and interacting with CLF, CLFd, ACN and ACNd solvents.  

**Table 5.2:** The experimental (for neat DMSO) and theoretical peak frequencies of C-H stretching mode of neat DMSO, dimer states and interacting with CLF, CLFd, ACN and ACNd solvents.  

**Table 5.3:** The experimental (for neat DMSO) and theoretical peak frequencies of CSC stretching mode of neat DMSO, dimer states and interacting with CLF, CLFd, ACN and ACNd solvents.  

**Table 6.1:** The optimized geometrical parameters of DMSO for monomer, chain dimer, cyclic dimer and interacting with CLF, CLFd, ACN and ACNd solvents.  

**Table 6.2:** The experimental (for neat DMSO) and theoretical peak frequencies of S=O stretching mode for monomer, chain dimer, cyclic dimer out-of-phase and in-phase vibrations of DMSO and interacting states with CLF CLFd, ACN and ACNd solvents.  

**Table 6.3:** The experimental peak frequencies of S=O stretching mode for chain dimer, cyclic dimer in-phase, cyclic dimer out-of-phase and monomer of DMSO at different solvent concentrations in CLF, CLFd, ACN and ACNd solvents.  

**Table 7.1:** The molecular parameters of the solute-solvent system.  

**Table 7.2:** Parameters for viscosity measurement.
