First of all, I express my deep gratitude and indebtedness to my Supervisor, Dr. R. Radhakrishna, for initiating, guiding and constantly helping me to carry out this research, whose comments and suggestions on the previous drafts of this work helped tremendously in visualising several facets of this study, which I otherwise would not have known.

My gratitude and indebtedness are also due to Dr. Atul Sarma whose valuable suggestions and comments at various stages of this work helped to develop this study. His timely help to fulfil certain official formalities is greatly acknowledged.

A draft proposal of this thesis work was presented in the 1978 National Input-Output Seminar at Bombay and the valuable suggestions offered by Professor P.N. Mathur on the regional Input-Output Model and Spatial allocation of economic activities was useful at the later stage of this work.

Mr. Vital, Industrial Commissioner, Govt. of Gujarat and Mr. Chavda, General Manager, D.I.C., Surendranagar, have helped me in conducting the industrial survey and also for
arranging my stay at Surendranagar. Apart from their help in organising the data collection, I am also grateful to them for the discussions we have had on the industrial policies and programmes.

C.S.R. Murthy and Niresh Shah put substantial input into organising the data and developing the programmes for computer analysis. Besides, the painstaking efforts made by Murthy, I am grateful to him for the discussions we had on the analytical tools employed in this study. My thanks are due to Nargis Patel for helping in data processing. The data analysis was done at the Computer Centre of the Physical Research Laboratory at Ahmedabad. Thanks to the Centre for its help and co-operation.

Dr. K.K. Subramanian put a lot of effort to arrange my fellowship with the Indian Council of Social Research. Dr. Y.K. Alagh has also put his efforts in this direction. Their efforts are duly acknowledged. I am grateful to Dr. B.N. Viswanath for his constant encouragements and help at various stages of this research. Debt is also due to B.V. Doshi for arranging my leave from the School of Planning to accept the Senior Research Fellowship of the ICSSR.
I am grateful to Augustin for typing the first draft of the thesis and special thanks and gratitude to Sudheendranathan who took undue efforts to convert the work into a neat and well typed final draft.

Many institutions have supported my research at various stages. I am grateful to the Sardar Patel Institute of Economics and Social Research, Ahmedabad for sponsoring my research candidature. I am grateful to the ICSSR for its financial support for the last six months of the research. My gratitude is also due to my parental Institution, School of Planning, for granting the valuable leave for six months. I am also grateful to the Central University and Osmania University of Hyderabad for arranging my stay at Hyderabad during the course of my research.

Inspite of the pressure of their own work, my colleagues at the School of Planning, Narendra Kumar, Baldev Singh, Somayajulu and many others helped me at various stages of the thesis. My special thanks to all of them.

My debt is beyond words to my wife, Geeta, for her help at various stages of this work. Her constant encouragement and help has gone a long way to complete this work.
