ACKNOWLEDGEMENT

I feel most grateful to my research guide Dr. B. S. Vaidya for suggesting the problem, patiently discussing the results and helping me to give the final shape to the thesis.

My thanks are also due to Professor J. J. Chinoy, Head of the Botany Department and Professor C. G. Khatri for extending all the possible laboratory facilities. Financial assistance in the form of a Junior Research Fellowship from Department of Atomic Energy Commission of India between 1971 and 1974 is gratefully acknowledged.

Principal J. J. Trivedi and Dr. S. C. Desai, Head of the Microbiology, M. G. Science Institute where I am serving at present gave me all the possible latitude in my duties to carry out the last phase of my research work. I sincerely thank them for this encouragement.

I express my thanks to Mr. Indravadan A. Modi the Director of Cadilla Laboratories and especially Mr. H. P. Jhala, Microbiologist of the same Institution for confirming our results of exudation of pantothenate and vitamin B_{12} by algae.

My laboratory colleagues Miss C. M. Vijayakumari, Miss Veela B. Mehta, Miss Kripa Nanavati and Dr. I. M. Patel extended helping hands all through out my work and I am deeply indebted to them.
