15. "d" spacing (Å) obtained for soil-MAP reaction products (Numbers in parentheses indicate values listed in the literature).

16. "d" spacing (Å) obtained for soil-MAP reaction products (Numbers in parentheses indicate values listed in the literature).

17. Infrared absorption bands obtained for soil-MAP reaction products (Numbers in parentheses indicate values listed in the literature).

18. Infrared absorption bands obtained for soil-MAP reaction products (Numbers in parentheses indicate values listed in the literature).

20. Nature of orthophosphate reaction products of DAP in Indian soils.

21. pH of extracts after reaction of saturated solution of DAP with different soils.

22. Chemical composition of reaction products formed by DAP with soils (Data for 15 days incubation period).

23. Chemical composition of reaction products formed by DAP with soils (Data for 3 months incubation period).

24. Chemical composition of reaction products formed by DAP with soils (Data for 1 year incubation period).

25. "d" spacing (Å) obtained for soil-DAP reaction products (Numbers in parentheses indicate values listed in the literature).

26. Infrared absorption bands obtained for soil-DAP reaction products (Numbers in parentheses indicate values listed in the literature).

27. Reaction products obtained for MAP when applied in a band to soils (Incubation period: 6 weeks).

28. Reaction products obtained for DAP when applied in a band to soils (Incubation period: 6 weeks).

29. "d" spacing (Å) obtained for soil-DAP reaction products (Numbers in parentheses indicate values listed in the literature).

30. The comparative efficiency of various orthophosphate reaction products as sources of phosphorus for maize plants grown in quartz sand culture.
31. Chemical composition of saturated solutions prepared from two pyrophosphate fertilizers used in this study.

32. Nature of pyrophosphate reaction products of TPP in Indian soils.

33. Nature of pyrophosphate reaction products of TPP in Indian soils.

34. "d" spacing (Å) obtained for soil-TPP reaction products (Numbers in parentheses indicate values listed in the literature).

35. "d" spacing (Å) obtained for soil-TPP reaction products (Numbers in parentheses indicate values listed in the literature).

36. Infrared absorption bands obtained for soil-TPP reaction products (Numbers in parentheses indicate values listed in the literature).

37. pH of extracts after reaction of saturated solution of TPP with different soils.

38. Chemical composition of reaction products formed by TPP with soils (Data for 15 days incubation period).

39. Chemical composition of reaction products formed by TPP with soils (Data for 3 months incubation period).

40. Chemical composition of reaction products formed by TPP with soils (Data for 1 year incubation period).

41. Theoretical composition of some pyrophosphate compounds.

42. Nature of pyrophosphate reaction products of TAPP in Indian soils.

43. Nature of pyrophosphate reaction products of TAPP in Indian soils.

44. "d" spacing (Å) obtained for soil-TAPP reaction products (Numbers in parentheses indicate values listed in the literature).

45. "d" spacing (Å) obtained for soil-TAPP reaction products (Numbers in parentheses indicate values listed in the literature).

46. Infrared absorption bands obtained for soil-TAPP reaction products (Numbers in parentheses indicate values listed in the literature).

47. Infrared absorption bands obtained for soil-TAPP reaction products (Numbers in parentheses indicate values listed in the literature).
48. pH of extracts after reaction of saturated solution of TAPP with different soils.

49. Chemical composition of reaction products formed by TAPP with soils (Data for 15 days incubation period).

50. Chemical composition of reaction products formed by TAPP with soils (Data for 3 months incubation period).

51. Chemical composition of reaction products formed by TAPP with soils (Data for 1 year incubation period).

52. Theoretical composition of some pyrophosphate compounds.

53. Reaction products obtained for TPP when applied in a band to soils (Incubation period: 6 weeks).

54. Reaction products obtained for TAPP when applied in a band to soil (Incubation period: 6 weeks).

55. "d" spacing (Å) obtained for soil-TAPP reaction products (Numbers in parentheses indicate values listed in the literature).

56. The comparative efficiency of various pyrophosphate reaction products as sources of phosphorus for maize plants grown in quartz sand culture.
