List of Tables

Introduction & Review of Literature:

Table-1: Estimated number of new cancer cases (thousands) worldwide in men (Notani, 2001; Parkin et al, 2005)

Table-2: Estimated number of new cancer cases (thousands) worldwide in women (Notani, 2001; Parkin et al, 2005)

Table-3: Major carcinogenic and genotoxic agents in Pan masala and Gutkha

Materials and Methods:

Table-4: Socio-demographic details of the subjects

Table-5: Clinical details of oral cancer patients for study of biomarkers

Table-6: Details of tobacco products

Results:

Table-7: Odd ratio of OPC and oral cancer for tobacco habits

Table-8: Mean urinary nicotine, cotinine, thioether and NO₂⁺ NO₃ levels in NHT and the subjects with habit of tobacco chewing

Table-9: Mean urinary nicotine, cotinine, thioether and NO₂⁺ NO₃ levels in NHT and subjects with habit of tobacco smoking

Table-10: Urinary nicotine, cotinine, thioether and NO₂⁺ NO₃ levels in tobacco non-abstinence and abstinence groups of oral cancer patients

Table-11: Comparison between urinary biomarkers and tobacco exposure

Table-12: Urinary biomarkers in relation to risk of oral cancer

Table-13: Correlation between urinary biomarkers of tobacco exposure

Table-14: Levels of Antip53 antibodies in controls, patients with OPC and oral cancer patients

Table-15: Levels of the biomarkers in controls (NHT and WHT) and oral cancer patients with habit of tobacco chewing

Table-16: Levels of biomarkers in controls (NHT and WHT) and oral cancer patients with habit of tobacco smoking
Table-17: Mean values of circulating biomarkers in tobacco non-abstinence and abstinence groups of oral cancer patients

Table-18: Comparison between circulating biomarkers and tobacco exposure

Table-19: Odds ratio analysis of erythrocyte biomarkers

Table-20: Odds ratio analysis of plasma biomarkers

Table-21: Multivariable analysis of socio-demographic parameters and biomarkers in untreated oral cancer patients

Table-22: Correlation of plasma NO$_2$+NO$_3$ with biomarkers of tobacco exposure

Table-23: Correlation of plasma NO$_2$+NO$_3$ with circulating biomarkers

Table-24: Correlation between biomarkers of tobacco exposure and antioxidant enzymes

Table-25: Correlation between antioxidant enzymes and detoxification enzymes

Table-26: Percentage positivity of GSTM1 gene in oral cancer patients

Discussion:

Table-27: Various reports on antip53antibodies in healthy individuals, patients with OPC and oral cancer patients
