LIST OF TABLES

1. Table No.1: Important morphological features of dark and pale Variyali sowa herbs.

2. Table No.2: Morphological differences of the fruits of dark Variyali sowa and pale Variyali sowa.

3. Table No.3: Physical constants and chemical composition of Anethum sowa herb oil and fruit oil.

4. Table No.4: Percentage and chemical composition of the fruit oil of Anethum sowa.

5. Table No.5: Physical constants and chemical constituents of different chemical races of Indian dill (Anethum sowa).

6. Table No.6: Some pharmacopoeial standards of European dill oils.

7. Table No.7: Different minor alkaloids isolated from Datura.

8. Table No.8: Percentage of total alkaloids in different parts of Datura innoxia plants as reported by various workers.

9. Table No.9: Effect of various chemical and physical treatments on the alkaloids of Datura innoxia Mill.

10. Table No.10: Percentage of total volatile oils and individual constituents in dark sowa herb before flowering.

11. Table No.11: Effect of ascorbic acid on the percentage of volatile oil and its constituents in pale sowa herb before flowering.

12. Table No.12: Table showing different components of the volatile oils in the herbs and fruits at various stages of development in Anethum sowa (dark variety).

13. Table No.13: Percentage of total volatile oils and individual constituents in dark sowa herb during fruiting.

14. Table No.14: Percentage of total volatile oil and individual constituents in the young fruits of dark sowa.
15. Table No.15: Percentage of total oil and individual constituents in mature green fruits of dark sowa.

16. Table No.16: Effect of ascorbic acid on the yield of dark sowa plants.

17. Table No.17: Effect of ascorbic acid on the yield of pale sowa plants.

18. Table No.18: Effect of ascorbic acid on the specific gravities and refractive indices of dark and pale sowa.

19. Table No.19: Dark sowa---volatile oil and its composition in fully mature fruits as influenced by ascorbic acid treatment.

20. Table No.20: Pale sowa---volatile oil and its composition in fully mature fruits as influenced by ascorbic acid treatment.

21. Table No.21: Effect of ascorbic acid on the diosgenin content in germinating seeds of *Trigonella foenum-graecum*.

22. Table No.22: Diosgenin content in ascorbic acid pre-treated fenugreek seeds.

23. Table No.23: Effect of ascorbic acid on length and dry weight of eight day old seedling (bearing only cotyledonary leaves) of fenugreek.

24. Table No.24: Table showing the diosgenin content in eight day old seedling (bearing only cotyledonary leaves) as affected by ascorbic acid treatment in fenugreek.

25. Table No.25: Effect of ascorbic acid on the diosgenin content of the leaves during the growing of the fenugreek plants.

26. Table No.26: Effect of ascorbic acid on the growth and yield of *Trigonella foenum-graecum*.

27. Table No.27: Percentage of diosgenin in the fenugreek seeds harvested from ascorbic acid treated plants.

28. Table No.28: Some differences between morphological characters of big leaf vasaka and small leaf vasaka.
29. Table No.29: Some pharmacognostic characters of leaf surface in big and small vasaka.

30. Table No.29a: Some pharmacognostic characters of leaf surface in big and small vasaka.

31. Table No.30: Effect of ascorbic acid on the leaf alkaloids of small vasaka.

32. Table No.31: Effect of ascorbic acid on the root alkaloids of small vasaka.

33. Table No.32: Effect of ascorbic acid on the leaf alkaloids of big vasaka.

34. Table No.33: Effect of ascorbic acid on big vasaka root alkaloids.

35. Table No.34: Effect of ascorbic acid on the total and individual alkaloids in the roots of Datura innoxia grown in summer.

36. Table No.35: Effect of ascorbic acid on the total and individual alkaloids in the leaves of Datura innoxia grown in summer.

37. Table No.36: Effect of ascorbic acid on the total and individual alkaloids in the stem of Datura innoxia grown in summer.

38. Table No.37: Effect of ascorbic acid on the total and individual alkaloids in the roots of Datura innoxia grown in winter.

39. Table No.38: Effect of ascorbic acid on the total and individual alkaloids in the leaves of Datura innoxia grown in winter.

40. Table No.39: Effect of ascorbic acid on the total and individual alkaloids in the stem of Datura innoxia grown in winter.

41. Table No.40: Effect of ascorbic acid on the total and individual alkaloids in the pericarp and seeds of Datura innoxia grown in winter.
