Table of contents

Chapter – 1 General Introduction
Review of Literature 1 - 15

Chapter – 2 Optimization of protein percentage in the shrimp feed by the control of C / N ratio 16 - 29

Chapter – 3 Effects of various modes of carbohydrate application and diets having various protein levels in the production and sustainability of *Penaeus monodon* (Fabricius) 30 - 48

Chapter – 4 On-farm trials on carbohydrate addition to the extensive farming system of *Penaeus monodon* (Fabricius) 49 - 65

Chapter – 5 Stocking density and carbohydrate addition relationship in the yield and sustainability of *Penaeus monodon* (Fabricius) 66 - 86

Chapter – 6 Comparative study on the performance of various carbohydrate sources in the control of inorganic nitrogen concentration in the grow-out of *Penaeus monodon* (Fabricius) 87 - 105

Chapter – 7 Periphyton production in two substrates at different levels of fertilization rate 106 - 120

Chapter – 8 Effects of periphyton and addition of carbohydrate in the production and sustainability of *Penaeus monodon* (Fabricius) 121 - 142

Chapter – 9 Summary 143 - 165

References 166 - 179
