# List of Tables

21 Sensitivity of SMMR brightness temperature $T_B$, to geophysical parameter Prabhakara et al. (1982)  
22 Major characteristic of the different microwave satellite sensors used  
31 Neural network model classification  
32 Different NN Models  
41 Regional statistics of simulated geophysical parameters  
42 Global statistics of simulated geophysical parameters  
43 Range of SST (K) used in MSMR operational algorithms  
44 Theoretical RMS retrieval accuracies of geophysical parameters by MSMR operational SR algorithm  
45 Statistics of simulated geophysical parameters and brightness temperatures used in MSMR NN training (M_S-I dataset)  
46 Initial noise figures in MSMR channel based on limited data and simulation  
47 Statistics of simulated training dataset used in TMI NN model  
48 Impact of Noise on class-I, 3HL-15N configuration for WVC  
49 Impact of noise on ($8T_B - 4GP$) NN Model, performed on test dataset (M.S-II)
4.10 Theoretical RMS error of different NN Models
4.11 MSMR bias RMS deviation with respect to RT model for all the channels
4.12 TMI bias and RMS deviation with respect to RT model for low resolution channels
4.13 Theoretical RMS error for TMI ($7T_B - 4GP$) retrieval on testing data points
5.1 Statistics of validation of MSMR derived water vapour with Vaisala
5.2 Inter-comparisons of water vapour of MSMR derived and MSMR finish products with TMI and SSM/I
5.3 Inter-comparisons of cloud liquid water of MSMR derived and MSMR finish products with TMI and SSM/I
5.4 Validation of MSMR NN and SR derived SST and SSW with in-situ (ICOADS Ships, $\approx 10900$, collocated data points)
5.5 Validation of MSMR NN/SR derived SST and SSW, with in-situ (ICOADS Buoys, number of collocated points $\approx 2569$)
5.6 Validation of MSMR NN/SR derived SST and SSW, with in-situ (NIOT buoys, number of collocated points $\approx 250$)
5.7 Inter-comparisons of SSW and SST for MSMR NN/SR derived with TMI and SSM/I finished products
5.8 Comparisons of MSMR derived geophysical parameters with MSMR finish products
5.9 Comparison of TMI ($7TB-4GP$) NN derived SSW and SST with ICOADS ships data with in $\pm 1$ hour with in $0.25^\circ \times 0.25^\circ$ grid
5.10 Comparison of TMI ($7T_B - 4GP$) NN derived SSW and SST with ICOADS buoys data with in 1 hour in $0.25^\circ \times 0.25^\circ$ grid
5.11 Comparisons of TMI NN derived geophysical parameters with TMI finish products for 2 cays 15-16, Jan 2000, 0.25° x 0.25° (latitude-longitude) average.
