Acknowledgement

I take it as one of the rare opportunity to thank some of the persons who have helped me in different ways during the past few years.

The first and foremost acknowledgement goes to my guide Prof. D. Bora. There are many good things about his guidance but the one I like most is the independence that he gives to his students to enable them to explore things in their very own way. It is beyond doubt that this thesis would not have been completed without his careful and vigilant guidance. I have learnt from him how to think as an experimentalist. I can not express my feelings in words here for helping me to attend the Euro-summer school in 2001 at Bad Honnef, Germany the experience of which made a great impact on me as a research scholar.

I would like to thank Prof. P.K. Kaw for giving me an opportunity to work in this institute. He has always been a source of inspiration. I also extend my sincere thanks to Prof. A. Sen, Dr. Amita Das, Dr. Raghvendra Singh and Dr. S. Kulkarni for many small but useful discussions at different occasions during my research work. I would like to express my gratitude towards the academic committee at IPR - Dr. P. Vasu, Dr. Shishir Deshpande for many valuable suggestions. The critical comments by Dr. R. Jha, Dr. Chenna Reddy and Dr. K.G. Ganesh Prasad are greatly solicited.

I owe a lot to RF group at IPR for providing all possible helps in the form of equipment, expertise and environment to carry out all the experiments. Everyone in the group has helped me in some form or the other and it is difficult to recall who helped me when and in what form. D. Rathi helped me whenever I faced problem related with vacuum or the pumps. P.R. Parmar helped me with mechanical drawings. The electrical subgroup of RF group was always available to sort out problems related with electrical equipment particularly power supplies. I am thankful to Pramod and Aparajita for the occasional but needful discussions which I had with them during my research work. I am extremely thankful to Harsha for helping me with the software to transfer data from the spectrum analyzer to PC.
I can thankfully call Mr. K. Sathyanarayana and Mr. R.G. Trivedi as my "trouble-shooters". Every time, I had a problem with my experimental system, I always started to look for "Sathya", as we call him, so that the fault can be identified and rectified to make the system operational as soon as possible. I was extremely lucky to have "Trivediji" around who helped me with the microwave power detection and calibration of different microwave components.

I am grateful to Mrs. Saradasri with whom I worked in the initial part of my tenure at IPR. She taught me many things regarding experiments. I also thank Mr. Mohandas and Dr. Ravi kumar for providing various equipmenys and instruments I needed during the experiments. My sincere thanks goes to LVPD group - Pankaj, Amulya, L.M. Awasthi and G. Ravi also for helping me in more than one way.

I received lot of encouragement from my seniors Deepak, Monojoy, Ganesh, Dastgeer, Venkat, Devendra, Deepak, Mani, Rajiv and Priyanka. I thanked Sambaran for sharing the problems, a reasearch scholar faced in IPR while doing experiments and otherwise. I also thank Shahid, Veeresha and Anuj alongwith Poonam, Jyotiirmoy, Varun and Surekha, Neeraj, Pintu, Shyama, Bhaskar, Santosha, Anand, Suraj, Vikrant; Surendra, Kishore, Subhash, Maya and Vijay for keeping the hostel environment extremely friendly. Two cute little girls, "Joyi" and "Vanya" needs special mention here. I thank Dr. Debarati Bhattacharya for her friendly advice during her stay at IPR which continued afterwards also. I acknowledge the ever enjoyable company of Rajneesh, Manas, Anurag and Amit Garg which they provide during my regular extended stays till late night in RF lab.

I acknowledge Dr. Shashank Chaturvedi and Pallavi for making hostel such a lively place on weekends. We used to celebrate every little occasion, in the hostel itself, that came our way during all these years. These celebrations proved to be great relaxations. I thanked both Ramdas and Sridevi also for the same. I am grateful to Mr. Raj Singh alongwith Anju bhabhiji for making me feel at home by our mutual visits. I have similar feelings for my Kamal bhaiya, Chetna bhabhi and other family members.

I thank Mrs. P.J. Pathak, Mrs. A. Das and other library staff members to help
me in many different ways. I gratefully acknowledge the service provided by the computer center staff specially Mrs. Sutapa Ranjan and Arvind. Thanks to the administrative staff also especially, Ms. Shirin and Silel for their help at different point of time during all these years. I can not bypass the consistent help extended to me by the workshop people and the stores department.

I sincerely thank Gayatri for keeping me cheerful in the lab. with her perennial smile. I learned from her how to keep oneself joyful even when the going is tough. I also acknowledge her for the company she provided me for lunch at IPR canteen during which she used to brief me the ongoing activities in RF group.

I can not express my sincere thanks for Dr. Prabal K. Chattopadhyay in simple words here. He is a great encourager and he taught me to look those things in a different perspective which seems quite obvious. He is a superb physicist and a great friend. Thanks Prabalda for whatever you have done for me.

It gives me great privilege to acknowledge Mr. Manu Bajpai as one of my close friend. The excellent comapny which Manu, his wife Roli and daughter Sonu provided to my family, is incomparable. It is a matter of pride for me to call myself a friend of Dr. S.K.P. Tripathi who inspired me so much that I decided to take up experiments in my research work and with whom I had a great time at RF lab.

In the end, it is my family which takes the credit of allowing me and keeping faith on me despite many failures in the begining. The moral support made available to me by my parents in the initial part and later on by my wife Jyoti has been invaluable throughout this tough and a bit long endeavours. To be the wife of a research scholar is not a ride of joy but I feel Jyoti has been splendid. It would be a sin if I do not acknowledge the patient long wait of my son Pariket for his papa. His cute smile by which he greets me on returning home after hard and tiring work refreshed me.
