ACKNOWLEDGEMENTS

I express my sincere gratitude to my guide, Dr. T. V. Rao, Professor, Indian Institute of Management, Ahmedabad, for his unfailing interest and inspiring guidance in the conduct of the research reported here. In spite of his extremely busy schedule he always had time to spare for this study.

I am indebted to many who have contributed to this work in some form or the other. My special thanks are due to my husband and senior colleague, Professor Vijay Padaki, who not only showed keen interest in this piece of research, but provided encouragement and support and offered many valuable and critical comments at each stage of the study. His interest in this study was matched only by his perseverance and patience. In spite of his numerous administrative and academic commitments, he willingly undertook the task of editing the manuscript. I take this opportunity to express my deep gratitude to him for all his direct and indirect contributions to the thesis. I must also thank our daughters, Chatura and Shabari, for their calm endurance of climate disturbances at the dinner table and for their continued cheerfulness through their mother's travail.

I am indebted to ATMA for providing facilities and permitting me to undertake this work for the Ph. D. degree. I am thankful to the previous Director of ATMA, Dr. P. C. Mehta, the present Director, Dr. T. Radhakrishnan, and the Head of the Human Resources Division, Dr. P. K. Shrivastava. Dr. Shrivastava was also a sounding board at the earliest stages of the study and the discussions with him were both thought provoking and of practical value in the conduct of the study.
I acknowledge the help and assistance I obtained from my colleagues. I sincerely thank Miss Pushpa Gandhi, Mr. N. I. Sindhi, Mr. Rajiv Sharma, Mr. F. Amsa and Mr. A. K. Agarwal for assistance and support in various phases of this work.

I must also acknowledge my gratitude to the managements of the mills and the respondents who participated in the study. Without their cooperation, the study could not have been undertaken in the scale attempted.

Finally, my sincere thanks are due to Mr. M. S. Pandya for undertaking the entire job of typing the manuscript in its various stages of preparation and carrying it out with his usual meticulousness.

HUPANDE PADAKI
