The present study may be regarded as the first step in the exploration of the Rorschach Test in Gujarat. Since half a century the Rorschach Test is very much popular specially in the clinical field all over the world. In India also this test occupies the top rank and is used as a psycho-diagnostic tool by most of the psychologists in the medical institutes. The empirical researches using the Rorschach, however are only a few. The present work is an attempt to find out the Rorschach responses which significantly discriminate the different socio-economic groups in Gujarat and its comparison with psychotic and neurotic groups.

It attempts to give overall profile of the normal personality of this particular culture and facilitates to point out where the patient's group differ from the Normal Sample. So far no such study on the normal Gujarati population has been undertaken. The obtained findings are very much inspiring and interesting.

Over and above sex variables and socio-economic status are included as the part of the study.

The present researcher also wants to establish the validity of the Rorschach responses by comparing it with the I.S.B. Test which is already standardized in Gujarat.
The researcher wants to express her sincere thanks to all those who have directly and indirectly contributed in this project. She is thankful to the authorities of the institutes and the psychiatrists of the private nursing homes who have willingly provided all the facilities for the purpose of data collection. She is equally grateful to the students and the participants who have whole-heartedly worked as the subjects. She is very much thankful to the director of B.M. Institute who has provided her the library facility.

How can she forget the invaluable and patient guidance given by Dr. Bhat throughout the whole project? She also appreciates the help given by Mr. S. K. Verma for the consultation of the statistical method. She is equally thankful to Mr. A. K. Paliya for typing the manuscript neatly, quickly and correctly. In spite of all this, if there are any mistakes in the final report, the author is willing to undertake the ultimate responsibility.
