ACKNOWLEDGEMENTS

I am deeply indebted to Dr. S.K. Chatterjee, Director, National Institute of Occupational Health (NIOH), Ahmedabad, for his continued valuable guidance and encouragement throughout the study.

I am grateful to the Director-General, Indian Council of Medical Research, New Delhi, for allowing me to pursue this research, and utilize the data for the thesis leading to Ph.D. degree of the Gujarat University.

I express my gratitude to Drs. P.N. Hanade, Miss S. Karimi and Pankaj Shah (ENT Department, New Civil Hospital, Ahmedabad) for their active involvement in ear, nose and throat (ENT) examinations of the weavers for normal ears diagnosis.

I am also grateful to Dr. J.R. Parikh (NIOH, Ahmedabad), who was directly involved in screening out normal healthy weavers through general medical examinations.

I gratefully appreciate the immeasurable cooperation of Shri Manubhai Shah, General Manager; Shri B.R. Desai, Personnel Officer, and Shri P.J. Mehta, Labour Welfare Officer, for providing me with information concerning this study and granting me facilities in carrying out the study in their Mills.
I am grateful to Dr. S.K. Ghosh, Biological Scientist, NIOH; Ahmedabad, for being so helpful in carrying out the collaborative part of the study on 'Psychobiological aspects of maze learning of mice in the noisy environment.'

I record my indebtedness to Miss Aparna Roy, ARO; NIOH; Ahmedabad, for her unreserved assistance at various stages of this study. Others to whom I am thankful are; Miss Sumitra Chintharia, Mr. N.M. Desai, and Mr. G.G. Parente, for their assistance in the study.

Last, but not the least, I am grateful to all those weavers who participated as subjects in this study, without which this research could not have been carried out.
