ACKNOWLEDGEMENTS

A journey is easier when you travel together. Interdependence is certainly more valuable than independence. This thesis is the result of seven years of part time work whereby I have been accompanied and supported by many people. It is a pleasant aspect that I have now the opportunity to express my gratitude to all of them.

The first person I would like to thank is my supervisor Dr. K. S. Beena, Reader in Civil Engineering, School of Engineering, CUSAT. I have been associating with her since 1995 when I started my M. Tech. thesis work. During these years I have recognised Dr. Beena as a sympathetic and supporting person. Her real enthusiasm and integral outlook on research have made an indelible impression on me. I owe her lots of gratitude for having shown me this way of research. She could not even realize how much I have learned from her. Besides being an excellent supervisor, Dr. Beena was as close as a relative and a good friend to me. Consequently, research life became smooth and rewarding for me.

I would like to thank Prof. (Dr.) T S. Ramanatha Ayyar, Former Director of Technical Education, Government of Kerala who kept a constant vigil on the progress of my work and was always accessible whenever I was in need of an advice. Especially the extensive discussions and interactions with Dr. Ayyar had a direct impact on the final form and quality of this thesis. I am equally indebted to Prof. (Dr.) Kuncheria P. Isaac, Principal, Government Engineering College, Wayanad for his valuable advices and help in getting financial aid for this work. The expert advices from Prof. (Dr.) K. Rajagopal, Professor of Civil Engineering, IIT Madras had become a turning point during my thesis work which is gratefully acknowledged.

I also wish to express my profound sense of gratitude to the Kerala State Council for Science, Technology and Environment (KSCSTE), Trivandrum for the financial assistance given to the experimental investigation of this work. I also express my sincere thanks to Mrs. Sheeja George, Former Principal Scientific Officer, KSCSTE, Trivandrum, and Dr. K. R. S. Krishnan, Former Director, KSCSTE for sanctioning the project.

My warm thanks are due to Dr. Vinod J. S., Post Doctoral Research Fellow, School of Civil, Mining & Environmental Engineering, University of Wollongong, NSW, Australia for assisting me in literature collection. I also thank Mr. Jayakrishnan P. V. and
Mr. Anwar Mohammed of M/s Maccaferri Pvt. Ltd., Mumbai for supplying the materials required for the experiments in time.

I recollect with gratitude the support and encouragement extended to me by Prof. (Dr.) P. S. Sreejith (Principal) and Prof. (Dr.) Benny Mathews Abraham (Professor and Head of Civil Engineering Division), School of Engineering, CUSAT, Kochi. I also wish to express my sincere thanks to Prof. (Dr.) J. Letha (Principal) and Prof. (Dr.) R. Sathikumar (Professor and Head of Civil Engineering Department), College of Engineering, Trivandrum.

Thanks are also due to all the faculty members of Departments of Civil Engineering at SoE, CUSAT, Kochi and CET. A special mention to Dr. Sreekumar S., Assistant Professor, CET who provided me with the required computing facilities for my thesis work. The encouragement and support rendered by Dr. K. K. Babu, Selection Grade Lecturer in Civil Engg., N. S. S. College of Engineering, Palakkad needs a special mention at this moment. Special thanks are also due to my friends and colleagues at CET – Bindu, Binu, Leena, Manju, Salini, Priyadarsini, Girija, Latheswary, Ajitha, Ajitha Bhaskar, Mariamma Joseph, Sheela Evangeline, the list goes on unending, for providing me a friendly, pleasant and cooperative atmosphere during my working hours at CET. I would like to express my heartfelt gratitude to the laboratory technical staff Smt. E. J. Saramma, Sri. K. T. Purushothuman, Sri. K. Pradeep, Sri. Babu Varghese, Sri. A. Aboobacker, Sri. Kunjimon and Ms. Preethi, C. D. of School of Engineering, CUSAT, for the technical assistance and co-operation during the experimental work.

My sincere thanks are also due to Mrs. Leena G, Mrs. Indu B., Ms. Meera Vasudevan and Ms. Ann George, Former P. G. students, Department of Civil Engineering, College of Engineering, Trivandrum and Ms. Nia Mathew, Ms. Dhanya and Ms. Chinchi former U. G. students, School of Engineering, CUSAT, Kochi for the continuous enthusiasm shown in helping me to carry out the experimental works.

I am extremely grateful to my husband Hari R. Chandran, for his support, patience and advices extended to me during the Ph.D. period. One of the best experiences that we lived through in this period was the birth of our daughter Harinandana J., who added a joyful dimension to our life. Without their encouragement and understanding it would have been impossible for me to finish this work.
In my opinion, doing a Ph.D. is a sacred task and this was definitely one of the best decisions of my life which was inspired by my father N. Parameswaran Pillai. Additional energy and vitality for this research was rendered by my mother D. Kamala Devi Amma who in spite of her ill health supported me throughout the work, especially nurturing my daughter, giving her a mother's care and comfort during my absence. My sister Dhanyasree P. K. helped me throughout the earlier stages of the work by assisting me in developing the finite element code as well as managing my household duties including taking care of my parents during the period of their illness and admission in hospital. Her services and support during the period of work can never be forgotten. It would be a flaw on my part, if I forget to mention the services and encouragement provided by my in-laws Mr. Ramachandran Nair and Mrs. Lalitha Bai Amma during the experimental part of my work. The continuous enthusiasm shown by my father-in-law in urging me to hasten up the long-winded work is deeply acknowledged. The supplementary supports provided by Mrs. Rani and Mr. Gopakumar (My sister-in-law and her husband) are also noteworthy which are deeply remembered with gratitude. The generous support from Mr. Venugopal, Kannan and Mrs. Sarojini Amma (Dr. Beena’s family) is gratefully appreciated. Within this period of research work, I have become a member of their family and I owe deep obligations to them for making me feel at home whenever I stayed with them and also for sparing Dr. Beena for me even at times they needed her most.

The chain of my gratitude would be definitely incomplete if I would forget to thank the first cause of this chain, using Aristotle's words, The Prime Mover. My deepest and sincere gratitude for inspiring and guiding this humble being are due to Almighty GOD.

Jayasree P. K.
