Acknowledgements

I would like to express my special appreciation and thanks to my supervisor Prof. Charu Lata Mahanta, The Dean (R&D), Tezpur University, for her insightful discussions, positive disposition and consistent encouragement I received throughout the research work. This feat was possible only because of the unconditional support and guidance provided by her. Madam has always made herself available to clarify my doubts, despite her busy schedules. The enthusiasm she has for academics and research is inspiring and motivational for me, and I consider it as a great opportunity to do my doctoral programme under her guidance and to learn from her research expertise. I would like to thank you for supporting my research ideas, for giving me the freedom to pursue work in different departments and for allowing me to grow as a research student by encouraging us to think more independently about our experiments and results. Your advice on both research as well as on my career have been invaluable.

I express my deepest gratitude to esteemed members of my Doctoral Committee, Prof. A. K. Mukherjee, Department of Molecular Biology and Biotechnology, Tezpur University, and Prof. S. C. Deka, Department of Food Engineering and Technology, Tezpur University, for their precious suggestions at various stages of the investigation.

I owe my profound gratitude and sincere regards to Prof. M. K. Chaudhuri, Vice Chancellor, Tezpur University, for allowing me to complete the research at the University, and for moral appreciation.

I am also thankful to Dr. M. K. Hazarika, Head, Department of Food Engineering and Technology, Tezpur University, and other faculty members of the department for the academic support and necessary facilities provided to carry out the experimental work.

Completion of this doctoral dissertation was possible with the support of several people. Faculty members from the other departments of the University have been very kind enough to extend their help at various phases of my research, whenever I approached them, and I do hereby acknowledge all of them. Scientists from Defense Research Laboratory have been very encouraging and supportive, and I express my gratitude to them.

The thesis would not have come to a successful completion, without the help I received from the technical staffs of the department. They have been very kind, patient and have always extended their support whenever I approached them, and I acknowledge them for their generosity.

My time at Tezpur University was made enjoyable in large part due to my friends, colleagues, seniors, juniors and other research scholars groups that became a part of my life. I gained a lot from them, through their personal and scholarly interactions, their suggestions at various points of my research programme. A special thanks to my family, who supported me in every possible way to see the completion of this work and longed to see this achievement come true. Your prayer for me was what sustained me this far.

I gratefully acknowledge DST-INSPIRE Programme, DST, and Tezpur University, for the financial help that made my research work possible.
