LIST OF TABLES

Table No.                                                                                         Page

I     Physical constants and analytical data of the substituted amalides of isonicotinic acid       44

II    Antitubercular activity of the synthesised compounds                                      95

III   Primary screening (Rough estimation of LD\(_{50}\)) of the synthesised compounds          99

IV    Primary screening (Rough estimation of LD\(_{50}\)) of the synthesised compounds          100

V     CNS depressed screening of the synthesised compounds                                     102

VI    Analgesic activity of the synthesised compounds                                          104

VII   Anti-inflammatory activity of the synthesised compounds                                  106
