## List of Figures

1.1 Graphene lattice ............................................. 2  
1.2 Brillouin zone of graphene ................................. 3  

2.1 Lattice hamiltonian spectrum with zig-zag and periodic boundary .... 23  
2.2 Exact diagonalization finite sized graphene with zig-zag boundary in magnetic field ........................................ 26  
2.3 Comparison between the eigenvalues from exact diagonalization and continuum model ................................. 28  
2.4 Exact diagonalization eigenvalues for graphene in cross electric and magnetic field ........................................ 30  
2.5 Comparison between exact diagonalization and continuum model results for cross electric and magnetic field ................. 32  

3.1 Coulomb interactions for graphene lattice .................... 43  

4.1 Wave function profile for $\sigma_H = -1$ .......................... 52  
4.2 Wave function profile for $\sigma_H = 0$ .......................... 53  

5.1 Dimensional mass parameter Vs. magnetic field ................... 80
5.2 Activation gap Vs magnetic field ........................................... 87

6.1 Phase diagram at $\sigma_H = 0$ .............................................. 102
6.2 Phase diagram at $\sigma_H = -1$ ............................................. 107
6.3 Gap Vs $B_T$ for excitations at $\sigma_H = 0$ .......................... 117
6.4 Phase diagram for excitations at $\sigma_H = -1$ ...................... 121
6.5 Gap Vs $B_T$ for excitations at $\sigma_H = -1$ ...................... 123
6.6 Delineated region in $U$-$V$ phase space from $\sigma_H = 0$ excitations ........................ 124
6.7 Delineated region in $U$-$V$ phase space from $\sigma_H = -1$ excitations ........................ 125
6.8 Delineated region in $U$-$V$ phase space for our interacting model consistent
   with experiments .......................................................... 126
