List of Tables

Table. 1: The plants used for the isolation of principle bioactive components against agricultural pests

Table. 2: Antifeedant activity of crude, fraction and isolated compound coniine against S. litura, A. janata and H. armigera

Table. 3: Contact Toxicity of E. crassipes crude, fraction and isolated compound coniine against S. litura, A. janata and H. armigera

Table. 4: Feeding deterrent activity of coniine and its nanoformulations against S. litura, H. armigera and A. janata.

Table. 5: Effect of P. capensis crude, fraction, isolated pure compound, plimbagin and its nanoformulations against feeding behavior of S. litura, H. armigera and A. janata

Table. 6: Feeding behavior of S. litura, H. armigera and A. janata against P. betle crude, isolated pure compound, euginol and its nanoformulations against

Table. 7: Feeding inhibitory effects of P. betle, isolated pure compound, α-pinene and its nanoformulations against S. litura, H. armigera and A. janata

Table. 8: Efficiency of linalool and its nanosilica hybrids in inhibiting the feeding activity of S. litura, H. armigera and A. janata

Table. 9: Effect of limonene and its silica nanoparticle conjugates on feeding behavior of S. litura, H. armigera and A. janata

Table. 10: Feeding activity of S. litura, H. armigera and A. janata on treatment with Ocimene and its nanoconjugates.

Table. 11: Feeding responses of S. litura, H. armigera and A. janata against Trans-caryophyllene and its nanoformulations

Table. 12: Feeding deterrent activity of nerolidol and its nanosilica conjugates against major agricultural pests, S. litura, H. armigera and A. janata.

Table. 13: Antifeedant activity of carene and its nano-biocomposites against S. litura, H. armigera and A. janata

Table. 14: Antifeedant activity of isolated botanicals against S. litura H. armigera and A. janata.

Table. 15: Antifeedant activity of nanoconjugated botanicals against S. litura H. armigera and A. janata.
Abbreviations

%  Percent
°C  Degree Celsius
µg  Microgram
µl  Microliter
cm  Centimeter
SINPs  Silica NanoParticles
m  Meter
g  Gram
nm  nanometer
RH  Relative Humidity
mm  millimeter
EA  Ethyl acetate
rpm  Retention per minute
FTIR  Fourier Transform Infrared Spectroscopy
XRD  X-ray diffraction
NMR  Nuclear Magnetic Resonance
EIMS  Electron Impact Mass Spectroscopy
GC  Gas Chromatography
GCMS  Gas Chromatography Mass Spectroscopy
ED  Effective dosage
LC  Lethal Concentration
FL  Fiducial limits
TEM  Transmission Electron Microscope
mV  Mille Volts
H  Hour
Min  minutes
CONSI  Coniine conjugated Silica nanoparticles
EUSI  Eugenol formulated Silica nanoparticles
APSI  α-pinene-Nano silica hybrids
LLSI  Linalool adsorbed Silica nano particles
LISI  Limonene conjugated Silica nanoparticles
