I would like to take this opportunity to convey my deepest sense of gratitude to my guides Prof. D. Srivastava and Prof. G. K. Dey who initiated me into the area of “Zirconium Alloys”, took time off their busy schedules to encourage me in times of difficulties and showed the right path in times of confusion. Their guidance has always been a crucial component of the present work. They have given me enough freedom and encouragement in trying new things during my research and provided all the support that I needed. I am also thankful to Prof. I. Samajdar and Prof. Prita for their continuous support during various experimental and theoretical works done as part of the thesis. They extended their helping hand and sagely advices at every stage of my work. It has been a pleasure being associated with them. I must make a particular mention of Prof. Michael Presuss, Prof. Leo Prakash and Arnas (University Of Manchester, U.K.) for their contribution with respect to work on neutron diffraction. It was a great experience for me to work with them. I was fortunate to be able to work with several colleagues and derive benefit of their expertise and wisdom in fine tuning my research. Some of the colleagues whom I owe special mention are my lab mates at IIT Bombay (Sahoo, Vijay, Ajay and Jain) and my colleagues at BARC (Dr. Tewari, Visu, Suman and Sanjay) and collaborators from NFC (Shri. S.K. Jha and Vaibhaw).

On personal front, I must thank all my mentors (Annayyagaru, Radhanarasinga Rao sir and Subbarao Uncle) for making me come to this stage. If not for their timely (particularity during my B. Tech days) help I wound not have been in this stage at all. My deepest gratitude to all of them.

Most importantly my special thanks to my wife, Amrutha, who took all the burden of taking care of a hyperactive child and let me concentrate on the research and thesis. My thanks are also to my mother and other family members whose blessings and well wishes ensured I complete this thesis.

Last but not least, I wish to thanks all those people who have developed the open source technologies because of which people like me benefited a lot. I am proud to use some of the best open source programmes for this work. These include \LaTeX (my favorite programme of all times), LAMMPS, Mtex, Ovito, ParaView, DXATool and ParaDis. I wish to thank all those people involved in developing these great softwares and salute their spirit.

K V Mani Krishna
