**LIST OF TABLES**

1. Sample distribution according to area of residence. .................................................. 33
2. Distribution of nuclear family types in consanguineous and non-consanguineous families. ... 35
3. Means and standard deviations of energy expenditure and energy expenditure per kg wt per day in kcal according to age. .......................................................... 41
4. Means and standard deviations of energy intake and energy intake per kg wt per day in kcal according to age. .......................................................... 43
5. Means and standard deviations of blood pressure and pulse rate according to age. ............. 50
6. Frequency of hypertension by sex and area of residence. .............................................. 52
7. Age corrections: Regression coefficients and percentage of variance accounted for by the final models. .......................................................... 54
8. Environmental index construction and age correction: Regression coefficients and percentage of variance accounted for by the final models. ......................... 56-57
9. Definitions of expected correlations ($\rho$) in PATHMIX. ............................................. 64
10. TAU model expectations.

11. Number of subjects (N), means, standard deviations (S.D), skewness (skew), and kurtosis (kurt) for uncorrected blood pressure by parent (P), offspring (O), and P-O combined (C) groups.

12. Maximum likelihood estimates of familial correlations (r), standard errors (+ SE), and effective sample sizes (n).

13. $\chi^2$ summary of alternative models tested.

14. Parameter estimates ± SEs for the general and most parsimonious models for systolic blood pressure.

15. Parameter estimates ± SEs for the general and most parsimonious models for diastolic blood pressure.

16. TAU model summary of alternative hypotheses tested.

17. TAU model parameter estimates ± SEs.

18. Observed correlations for raw and age-sex-corrected blood pressure and expected correlations for age-sex-corrected blood pressure under NIRMIX and TAU models.
19. Commingling analysis for systolic blood pressure, complete sample.  

20. Commingling analysis for systolic blood pressure, noninbred sample.  

21. Commingling analysis for diastolic blood pressure, complete sample.  

22. Commingling analysis for diastolic blood pressure, noninbred sample.  

23. Heterogeneity between generations and best power transforms.  

24. Segregation analysis for systolic blood pressure using the complete data.  

25. Segregation analysis for systolic blood pressure using the noninbred data.  

26. Segregation analysis for diastolic blood pressure using the complete data.  

27. Segregation analysis for diastolic blood pressure using the noninbred data.  

28. Summary table of segregation analysis results.  

29. Familial Correlations for systolic blood pressure — Previous literature.
30. Familial correlations for diastolic blood pressure –
  Previous literature.  
  119-120

31. Heritability estimates—Previous literature.  
  124-126
