# List of Tables

4.1.1 - Cross classification of subject-items (SIs)

a) Experimental-Executives  
b) Experimental-Academicians  
c) Control-Executives  
d) Control-Academicians  
e) Experimental-Overall  
f) Control-Overall  

4.1.2 - Values of paired 't' test and their significant in respect of stress symptoms.  

4.1.3 - Improvement in the distress position symptoms among both experimental and control group subjects from pre-yoga period to post-yoga period.  

4.2.1 - Values of paired 't' test and their significance in respect of the number of stresses.  

4.2.2 - Values of paired 't' test and their significance in respect of Stress Control Index (SCI).  

4.2.3 - Values of paired 't' test and their significance in respect of reaction to stress situation.  

4.3.1 - Problem oriented coping behaviour pattern for before and after yoga periods - Experimental group.  

4.3.2 - Adaptive and Affective oriented coping behaviour pattern for before and after yoga periods - Experimental group.  

4.3.3 - Maladaptive/Affective oriented coping behaviour pattern for before and after yoga periods - Experimental group.  

4.3.4 - Problem oriented coping behaviour pattern for before and after yoga periods - Control group.  

4.3.5 - Adaptive and affective oriented coping pattern for before and after yoga periods - Control group.  

4.3.6 - Maladaptive and effective oriented coping behaviour pattern for before and after yoga periods - Control group.  

4.3.7 - Rank order correlation between the total scores for GP categories - Group-wise
