CONTENTES

CHAPTER I: INTRODUCTION

1.1. Introduction 6
1.2. Coronary Artery Disease: Definition, Pathophysiology, Prevalence, Risk factors 6 -11
1.3. Management of CAD: Pharmacologic, PCI, CABG, CR 11-14
1.4. Coronary Artery Disease in India 14
1.5. Coronary Artery Disease in Iran 15
1.6. Common points in India & Iran with respect to CAD 16
1.7. History of Cardiac Rehabilitation; Benefits & Barriers 16
1.8. Alternatives to standard Cardiac Rehabilitation 16
1.9. Outcome measures in CAD & CR 17-31
   I) Health Related Quality of Life: Generic Instruments & Disease Specific Instruments, Need of SF-36
   II) Functional Capacity in Cardiac patients: Exercise testing in CAD patients, MET level in CAD patients
   III) Left Ventricular Ejection Fraction: Definition, Methods of measurement
1.10. Importance of LVEF & Functional Capacity in CR of CAD patients 32
1.11. Need of alternative methods of CR 32
1.12. Statement of Problem 32
1.13. Recent trends in scientific study of the importance of the cardiac rehabilitation in clinical practice: International & National status 33
1.14. Significance of the proposed study in the context of current status 34-35

OBJECTIVES OF THE STUDY 36
CHAPTER II: REVIEW OF LITERATURE

2.1. Search Strategies 39

2.2. CVD: Prevalence, Epidemiology & Its risk factors 39-43

2.3. Pathophysiology of Coronary dysfunction, & effect of exercise 43-45

2.4. Quality of life in cardiac patients 45-47

2.5. Exercise testing & training in cardiac patients 47-48

2.6. Cardiac Rehabilitation: It’s Barriers & Alternatives 48-52

2.7. Importance of Ejection Fraction & MET level in Cardiac Rehabilitation 52

2.8. Review of Randomized clinical trials on Hospital versus Home-based Cardiac Rehabilitation 52-55

2.9. Research gap 55-56

CHAPTER III: METHODOLOGY

3.1. Study design 59-60

   I) Study Design

   II) Study Centers

   III) Sample Size

3.2. Subjects 61

3.3. Inclusion criteria 61

3.4. Exclusion criteria 61

3.5. Outcomes 61

3.6. Instruments 62-64

3.7. Procedure 65-74

   I) Ethical Clearance

   II) Screening & Randomization

   III) Base-line Data Collection

   IV) Study Intervention: Exercise-based CR

   V) Monitoring

   VI) Indications for termination of Exercise

   VII) Medical Treatment
CHAPTER IV: RESULTS

4.1. Results from both centers; Pooled data
4.2. Results from Center I; India
4.3. Results from Center II; Iran

CHAPTER V: DISCUSSION

5.1. Outline
5.2. Study on Quality of Life
5.3. Study on Left Ventricular Ejection Fraction
5.4. Study on Functional Capacity
5.5. Study on Secondary outcomes
5.6. Drop outs & Adherence
5.7. Limitations of study
5.8. Clinical Implication
5.9. Suggestions for future research

CHAPTER VI: CONCLUSION
