LIST of FIGURES

Chapter I

Fig. 1.1 Four stages in the collision of two heavy nuclei, reading from top to bottom: initial approach, interaction through the color field, formation of a Quark-Gluon Plasma and radiation of photons and lepton pairs, and formation of hadronic matter.

Fig. 1.2 A schematic diagram of collision geometry and pseudo-rapidity distributions in heavy ion nucleus-nucleus collisions at high energy.

Fig. 1.3 Particle production for two extreme scenarios. The Fermi Landau model shows complete stopping, in (a) and the Bjorken – McLerran model shows partial transparency, in (b).

Fig. 1.4 Cayley tree representation of intermittency.

Fig. 1.5 Box diagram of intermittency. The initial phase space is into boxes following the Cayley tree scheme of Fig. (4.1).

Chapter III

Fig. 3.1 Multiplicity distributions of secondary charged particles produced in the interactions of $^{28}$Si-Em, $^{12}$C-Em and P-Em at 4.5A GeV/c for (a) black tracks (b) grey tracks and (c) heavily ionizing tracks.

Fig. 3.2 Total charged multiplicity distributions of particles produced in the interactions $^{28}$Si-Em and $^{12}$C-Em at 4.5A GeV/c.

Fig. 3.3 Multiplicity distributions of secondary charged particles produced in the interactions of $^{28}$Si-AgBr and $^{12}$C-AgBr at 4.5A GeV/c for (a) black tracks (b) grey tracks and (c) heavily ionizing tracks.

Fig. 3.4 Multiplicity distributions of secondary charged particles produced in the interactions of $^{28}$Si-CNO and $^{12}$C-CNO at 4.5A GeV/c for (a) black tracks (b) grey tracks and (c) heavily ionizing tracks.

Fig. 3.5 Integral multiplicity distributions of heavily ionizing particles produced in the interactions of (a) $^{28}$Si-Em and (b) $^{12}$C-Em at 4.5A GeV/c.

Fig. 3.6 Shower particle multiplicity distributions in the interactions of (a) $^{28}$Si-Em, $^{12}$C-Em and P-Em (b) $^{28}$Si-AgBr and $^{12}$C-AgBr and (c) $^{28}$Si-CNO and $^{12}$C-Em at 4.5A GeV/c.

Fig. 3.7 Variation of $<N_{t}>$, $<N_{g}>$, $<N_{h}>$ and $<N_{s}>$ as a function of projectile mass number (Ap).

Fig. 3.8 Multiplicity correlations of various charged particles produced in the interactions of $^{28}$Si-Em at 4.5A GeV/c.

Fig. 3.9 Multiplicity correlations of various charged particles produced in the interactions of $^{12}$C-Em at 4.5A GeV/c.

Fig. 3.10 Shower particle multiplicity distributions in terms of KNO Scaling in the interactions of (a) $^{28}$Si-Em and (b) $^{12}$C-Em at 4.5A GeV/c.

Fig. 3.11 Variation of D(Nc) as a function $<N_{s}>$ at various energies.

Fig. 3.12 Black particle multiplicity distributions in terms of KNO Scaling in the interactions of (a) $^{28}$Si-Em and (b) $^{12}$C-Em at 4.5A GeV/c.
Fig. 3.13 Two particle rapidity gap distributions in the interactions of 
(a) $^{28}\text{Si-Em}$ and (b) $^{12}\text{C-Em}$ at 4.5A GeV/c 64
Fig. 3.14 Three particle rapidity gap distributions in the interactions of 
(a) $^{28}\text{Si-Em}$ and (b) $^{12}\text{C-Em}$ at 4.5A GeV/c 65
Fig. 3.15 The overall distribution of events with a given value of Q at 
different energies 69
Fig. 3.16 The distributions of events as a function of Q for (a) $N_h = 0.1$, 
(b) $2 \leq N_h \leq 7$ and (c) $N_h \geq 8$ 71
Fig. 3.17 Variation of $<Q>$ as a function of $N_g$ for $^{28}\text{Si}$ and $^{12}\text{C}$ at 
4.5A GeV/c for (a) CNO and (b) AgBr targets 72
Fig. 3.18 Variation of (a) $<N_h>$, (b) $<N_g>$, (c) $<N_h>$ and (d) $<N_g>$ as a 
function of $<Q>$ for $^{28}\text{Si}$ and $^{12}\text{C}$ at 3.7, 4.5 and 
14.6A GeV/c respectively 73
Fig. 3.19 Variation of (a) $<N_h>$, (b) $<N_g>$, (c) $<N_h>$ and (d) $<N_g>$ as a 
function of $Q/Z_p$ for $^{28}\text{Si}$ and $^{12}\text{C}$ at 4.5A GeV/c 75

Chapter IV
Fig. 4.1 Variation of $\ln <F_q>$ as a function of $\ln M$ in the interaction 
of (a) $^{28}\text{Si-Em}$ (b) $^{28}\text{Si-CNO}$ and (c) $^{28}\text{Si-AgBr}$ at 4.5A GeV/c 86
Fig. 4.2 Variation of $\ln <F_q>$ as a function of $\ln M$ in the interaction 
of (a) $^{12}\text{C-Em}$ (b) $^{12}\text{C-CNO}$ and (c) $^{12}\text{C-AgBr}$ at 4.5A GeV/c 87
Fig. 4.3 Variation of $\ln <F_q>$ as a function of $\ln M$ in FRITIOF data for 
(a) $^{28}\text{Si-Em}$ (b) $^{28}\text{Si-CNO}$ and (c) $^{28}\text{Si-AgBr}$ at 4.5A GeV/c 88
Fig. 4.4 Variation of $\ln <F_q>$ as a function of $\ln M$ in FRITIOF data 
for (a) $^{12}\text{C-Em}$ (b) $^{12}\text{C-CNO}$ and (c) $^{12}\text{C-AgBr}$ at 4.5A GeV/c 89
Fig. 4.5 Variation of fractal dimension $d_q$ as a function of q in the interactions 
of (a) $^{28}\text{Si}$ & $^{12}\text{C-Em}$ (b) $^{28}\text{Si}$ & $^{12}\text{C-CNO}$ and (c) $^{28}\text{Si}$ & $^{12}\text{C-AgBr}$ 
at 4.5A GeV/c 92
Fig. 4.6 Variation of Generalized dimension $D_q$ as a function of q for 
(a) $^{28}\text{Si}$ & $^{12}\text{C-Em}$ (b) $^{28}\text{Si}$ & $^{12}\text{C-CNO}$ and (c) $^{28}\text{Si}$ & $^{12}\text{C-AgBr}$ 
at 4.5A GeV/c 94
Fig. 4.7 Variation of $D_q$ as a function of ln $(q/q-1)$ in $\eta$-space for (a) $^{28}\text{Si}$ & 
$^{12}\text{C-Em}$ (b) $^{28}\text{Si}$ & $^{12}\text{C-CNO}$ and (c) $^{28}\text{Si}$ & $^{12}\text{C-AgBr}$ at 4.5A GeV/c 97
Fig. 4.8: Variation of $\lambda_q$ as a function of q in $\eta$-space for (a) $^{28}\text{Si-Em}$ 
(a) $^{28}\text{Si}$ -CNO and (c) $^{28}\text{Si-AgBr}$ at 4.5A GeV/c 99
Fig. 4.9: Variation of $\lambda_q$ as a function of q in $\eta$-space for (a) $^{12}\text{C-Em}$ 
(b) $^{12}\text{C-CNO}$ and (c) $^{12}\text{C-AgBr}$ at 4.5A GeV/c 100
Fig. 4.10: Variation of $2ln F_q(q-1)$ as a function of $\ln M$ for (a) $^{28}\text{Si}$ and 
(b) $^{12}\text{C}$ at 4.5A GeV/c. 102
