ACKNOWLEDGEMENTS

It is pleasure for me to join the entire enlightened scientist in our laboratory here in CSMCRI. First of all I would like to express my deep sense of profound gratitude and indebtedness to my honorable guide Dr. N. H. Khan, whose continuous encouragement and devout dedication to work have throughout been an everlasting source of inspiration and cynosure to me. His support and open mind for new concepts, freedom to explore new ideas, valuable suggestions to appropriate time and eventually the patience and care he had with me made myself strong enough to complete my work in the present form.

Words prove inadequate when one sets out to thank someone so dedicated to work with vivid incarnation of knowledge and has been continuously inspiring me.
