DEDICATED TO

My father: Late Mr. Jacob Charles Philip Prasad
My mother: Mrs. Esther Rani Charles
My brother: Charles Richard John Lalith and
To my guide: The Holy Spirit
ACKNOWLEDGEMENTS

I would like to thank my guide Dr. Akhilesh Pandey for giving me an opportunity to work with him as a Ph.D. student initially at the Institute of Bioinformatics and later as a research trainee at the Institute of Genetic Medicine at the Johns Hopkins University, Baltimore, MD. It is a privilege to work with him and I am indebted to him for his altogether persistence is shaping me into a no nonsense scientist. I must say that there is a long way for me to go in order to emulate his ideals but the one thing I can never forget is his commitment to excellence in teaching and in being a perfectionist. A characteristic trait of his that I hope to make my own is his passion to dream big and it has been the one feature that I cherish and I would like to thank him for training me and teaching me to believe that there is no tomorrow and one needs to plan big to achieve big though it may seem to be an impossible idea. This is what I believe makes pioneers and I thank Akhilesh for being such an inspiring person and more importantly for being my guide in the truest sense.

My thanks to Dr. Raghothama Chaerkady (Dr. Cha) my Co-guide without whose help any of this theses would have ever taken shape. For training me in cutting edge mass spectrometric techniques without which I would never have been able to not do any of these experiments. I thank Raghothama for being very patient with my mistakes and for never once losing his patience. It would have practically been impossible for me to get this thesis in order if it not were for his constant encouragement.

I would like to thank Dr. Udayan Guha under whose guidance I worked at the Memorial Sloan Kettering Cancer Center (MSKCC), NYC, NYC as a research student. The whole project of investigating cell signaling from an EGF context in a lung adenocarcinoma was his idea and it could have never been possible for this project to complete without the guidance of Udayan. I would like to thank him for being an excellent teacher and his family for a wonderful time I had at New York City during my training stint. Getting trapped in the snow storm was one of those
moments that I can never forget. I did learn that the sky is the limit with Udayan who being both a dedicated physician and a scientist could do the best in both fields.

My thanks to Dr. Harold Varmus, with whom I could work as a research student at MSKCC for providing grant support for my stay at New York and more than that to be able to work with a Nobel laureate in the cutting edge of lung cancer research. I can never forget Harold for showing me that it doesn’t matter where and what you are doing and what you have achieved but at the end of the day to be humble, simple and get to spend time with family.

My thanks for the Council for Scientific and Industrial Research (CSIR) for providing me with the Senior Research Fellowship for my Ph.D. work.

I would like to thank Dr. Charles Boone for providing me with a Canadian Institute for Advanced Research (CIFAR) fellowship to his lab at the University of Toronto, Toronto, CA. It was there I could learn to use large scale rapid recombination system developed in his lab to understand protein interactions strategies in identifying interactors of kinases and phosphatases. I would also like to thank Franco Vizeacoumar and Nydia Van Dyk for all the help they provided in my stay there.

I thank Jun Zhong, Min-Sik Kim, Derese Getnet, Patrick Shah, Tai-Chung Huang, Yi-Yang, Vineela, Santosh Renuse and Kumaran Kandasamy from the Pandey lab who have been very helpful in my stay at Hopkins. I would especially like to thank Xinyan for teaching me to stand up for others and I really appreciate all his help and the wonderful barbeques at his home. I would like to thank Maria Isabel from the Cole lab and Abena Agyeman from the Johns Hopkins School of Public Health for all their help and constant encouragement in all my experiments and for being very good friends.

I would like to thank Manoj Kashyap for being a very encouraging friend and patient teacher and in also teaching me the value of doing quality research and especially in understanding and
dealing with patients in a day to day basis. I would also like to thank Arivu for her help with the antibody validations. Most of the phospho antibody experiments were done with their help and it would never have been possible to validate the findings of my mass spectrometric analysis without this.

My thanks to the team at IOB, Keshav, Harsha, Sujatha, Jagadeesha, Renu, Krishna, Ghantasala, Deepthi, Rajesh, Sowmya, Abhilash, Lavanya, Sutopa, Nandini, Lakshmi, Dhanashree, Mitali, Santosh, Harsh, Shyam, Praveen, Sneha, Joji, Babylakshmi, Tejaswini, Vishalakshi, Jyoti, Aneesha, Vikram, Prashanth, Amir, Hariprasad, Shivakumar, Suresh and Kumaran and who have been very helpful in scientific interactions I have had in my stay at IOB. A special thanks to Yashwant and Rajasekhar who has been very good friends and a constant source of encouragement.

I would like to also thank Dr. Rekha, Dr. Vijayakumar and Dr. Veerendrakumar from the Kidwai Memorial Institute of Oncology who have been helpful in teaching me basics of clinical research and for providing patient samples whenever it was needed for research.

I am indebted to the immense help that I have had from the expert team at Manipal University. My thanks to Dr. Ranjini Kuduva, Dr. Udaya Shankar and Dr. Ullas Kamat who have been very prompt in taking care of all my queries and who have not been bogged down by all the E-mails and telephone calls I have been making. A special word of thanks to Ms. Sujatha Nayak who has been the most helpful in directing all my queries and requests to the right people. It would not have been possible to get all the documents ready were it not for her help.

This would mean nothing if I could never thank my father Mr. Jacob Charles Philip Prasad who is not there with me but I do know that you are watching me daddy and I am now completing my Ph.D. and I know you are watching from heaven. I can never ever forget the inspiration that you have been in everything you did and said. You have taught me to never concede defeat and to
always be fair in all that I did. I cherish every second that you spent with me. I just feel sad that you are not around to see me now Dad.

It goes without question that my mother Mrs. Esther Rani Charles deserves the best mention for going through all the pain and suffering without dad and for making my brother and I what we are today. It was only your sacrifices that have gotten us to progress forward. You never made us feel that we were lacking something and have played both the role of a mother and a father. Mom there is no way I can repay you for all that you have done because words cannot do justice. Mom thank you for everything that you have ever done and for your blessing that has always been on us. Not a day would have gone by had it not been for your prayers. Thank you; thank you and love you mom.

Hey Charles Richard John Lalith, thank you for being the best brother that I could ever have had. Thanks again for your help in everything man and for being around to knock sense into my head when I was backsliding. Your constant encouragement is all that has pushed me to this state. I love you brother and I thank you for being a friend and a scientist and for always being there whenever I needed you. I can never forget the time that you spent in the hospital a place you would never step in and man you have been more than a brother to me. Thanks a million for just being there. Well besides that here’s to saying that Oncology is a better field of research than “Artifact” biology. Wish you all the very best in your Ph.D. and May you go and shine in all that you do.

None of this would have ever been possible had it not been for the presence and guidance of the Holy Spirit who has renewed my bones in times of weakness and for being an ever present help. For providing me with Peace that passeth all understanding and for being my sole companion in times of loneliness. Father, were it not for your grace in my life, I would have been long gone years ago. You have a great plan for me and Father; never let me stray away from my path and
especially to be in your perfect will in all that I do. Lord I never forget what you told me when dad passed away and you have been much more that what your word says. Dad you promised to me that you would be a Father to the fatherless and a judge to the widows (Psalms 68:5) and you have been more that what I can content. Thank you Lord for being there ALWAYS. To you be all the glory forever and ever!
