LIST OF TABLES

Chapter 2
Table 2.1  Analytical methods of soil quality parameters  12

Chapter 3
Table 3.1  Sampling site characteristics  23
Table 3.2  Mean values of soil parameters in different paddy fields  25
Table 3.3  Soil carbon fractions  28
Table 3.4  Vertical distribution of SOC % distribution in different paddy land categories  30
Table 3.5  Soil carbon fractions in different paddy land categories  32
Table 3.6  Status of labile and non -labile carbon and C lability index (CLI)  33
Table 3.7  POC concentration in different paddy land categories  36
Table 3.8  Proportion of PCM in different paddy land category  37
Table 3.9  MBC and its proportion in SOC in different paddy land categories  39
Table 3.10  WSA proportion in different paddy land categories  41
Table 3.11  C pool vulnerability status of different paddy land categories  42
Table 3.12  Source sink capacity of different paddy land categories  43
Table 3.13  GHG emission status and GWP in different paddy land categories  44

Chapter 4
Table 4.1  Baseline properties of the soil prior to the treatments  51
Table 4.2  Physico-chemical parameters of the soils after harvesting  51
Table 4.3  Variation of SOC under different treatment conditions  53
Table 4.4  Soil organic carbon fractions under different treatment conditions  54
Table 4.5  Carbon Lability Index (CLI) under different treatment conditions  54
Table 4.6  Proportion of POC under different treatment conditions  56
Table 4.7  MBC content and its proportion to SOC under different treatment conditions  
Table 4.8  PCM content and its proportion to SOC under different treatment conditions  
Table 4.9  WSA (%) proportion under different treatment conditions  
Table 4.10  GHG emission and global warming potential (GWP)  
Table 4.11  Rice growth profile under different treatment conditions  
Table 4.12  Influence of weed growth on soil – biomass carbon  
Table 4.13  Influence of weed growth on soil C Carbon Lability  
Table 4.14  Global warming potential  

Chapter 5  
Table 5.1  The organic amendments used for the study  
Table 5.2  The inorganic amendments used for the study  
Table 5.3  Characteristics of inorganic amendments  
Table 5.4  Characteristics of organic amendments  
Table 5.5  Baseline properties of the soil prior to the treatments  
Table 5.6  Soil characteristics after growth trial  
Table 5.7  THB count under different amendments  
Table 5.8  SOC concentrations under different amendments  
Table 5.9  Labile and non-labile C fractions and lability index (CLI)  
Table 5.10  POC content and proportion to SOC  
Table 5.11  MBC content and its proportion to SOC  
Table 5.12  PCM content and proportion to SOC  
Table 5.13  Global warming potential (GWP) under different amendments  
Table 5.14  Growth profile of rice cultivar  

Chapter 6  
Table 6.1  Characteristics of different biochars  
Table 6.2  Elemental concentration (weight %) of various biochars.  
Table 6.3  Porosity of different biochars
Chapter 7
Table 7.1  Baseline soil properties 114
Table 7.2  CO₂ emission from soil applied with different biochars for 45 days 115
Table 7.3  Result of seed germination test 117
Table 7.4  Soil characteristics after growth trial 118
Table 7.5  SOC and its fractions under different biochar trials 122
Table 7.6  POC content and its proportion to SOC under different biochar content 124
Table 7.7  MBC content and its proportion to SOC under different biochar content 125
Table 7.8  PCM content and C turnover under different biochar trials 126
Table 7.9  Soil carbon counter parts and Lability Index under different biochar trials 127
Table 7.10  GHG emission status and GWP under different biochar trials 129
Table 7.11  Growth profile of rice cultivar under different biochar trials 130

Chapter 8
Table 8.1  Treatment conditions 136
Table 8.2  Baseline properties of the soil prior to the treatments 136
Table 8.3  Soil characteristics after the growth trial 137
Table 8.4  Soil organic carbon fractions after the growth trial 137
Table 8.5  Labile (C_L) and non-labile (C_NL) C fraction and LI of different trials 139
Table 8.6  POC concentration under various trials 141
Table 8.7  MBC concentration under various trials 142
Table 8.8  PCM concentration under various trials 143
Table 8.9  WSA proportion under various trials 143
Table 8.10  GHG Emissions and subsequent GWP 146
Table 8.11  Growth profile of the rice cultivars 147
Table 8.12  Correlation between parameters 147
