ACKNOWLEDGMENTS

My deepest indebtedness goes to my supervisor Professor R.D. Dikshit, who encouraged me to take up this challenging theme for my Ph.D. research. The period spent in this research has been a most enjoyable one. His guidance, encouragement, and generous help throughout the period of my studentship has made this thesis more coherent than it might otherwise have been. He helped me to say what I wanted to say. Any inconsistencies and lapses that might still remain, are my own responsibility.

I am thankful to Dr. Karan Singh Rathee and Dr. Satpal Dahiya for their help in eliminating infelicities in my draft. Ms Jaya Dikshit of National Fertilizers Limited, was kind enough to go through the chapters on data analysis for the two states, and helped me clarify many a point.

I am under special obligation to Professor Shri Bhagwan Dahiya of the Department of Economics, who placed his computer facilities at my disposal. I remain very thankful for his generosity.

I am also indebted to the help and guidance received from the staff of the following libraries: Maharshi Dayanand University, Rohtak; and the Rattan Tata Library of Delhi University, the Jawahar Lal Nehru
University Library, the National Archives, and the Election Commission library, all located in Delhi. I am also indebted to the library staff of the Himachal Pradesh University Library.

I remain most bounden to my revered parents who have all along been most supportive in my studies and research, and whose high expectations always helped me to keep my head high and to forge ahead in the pursuit of academic excellence. No word can express the depth of indebtedness that I owe to them.

I am also thankful to my younger brother, Satinder Singh, for his help and support in the course of my work.

ROHTAK
AUGUST 1995.
