## Contents

1 A Prelude to the Study 7
  1.1 Introduction .................................................. 8
  1.2 Strong and Weak form of Closed Sets .......................... 8
  1.3 Continuous Maps In Topological Spaces ......................... 10
  1.4 Types of Topological Spaces .................................. 12
  1.5 Open and Closed Maps ....................................... 14
  1.6 Irresolute Maps .............................................. 16
  1.7 Homeomorphisms in Topological Spaces ....................... 17
  1.8 Čech Closure Space ........................................... 18
  1.9 Contributions of the Author ................................ 19
  1.10 List Of Notations ........................................... 20

2 $\pi^*g$-Closed Sets in Topological Space 21
  2.1 Introduction .................................................. 22
  2.2 $\pi^*g$-Closed Sets and $\pi^*g$-Open Sets .................... 22
  2.3 $\pi^*g$-Interior and $\pi^*g$-Closure Operator ................ 30
  2.4 $\pi^*g$-Continuous Functions ................................ 37

3 $\pi^*g$ - Homeomorphisms 44
  3.1 Introduction .................................................. 45
  3.2 $\pi^*g$-Open Maps and $\pi^*g$-Closed Maps .................. 45
  3.3 $\pi^*g$-Irresolute Functions .................................. 51
  3.4 $\pi^*g$-Homeomorphisms ...................................... 56

4 Functions on $\pi^*g$-closed sets 67
  4.1 Introduction .................................................. 68
  4.2 Quasi $\pi^*g$-Open Functions ................................ 68
  4.3 Contra $\pi^*g$-Continuous Functions ........................... 72
  4.4 Almost Contra $\pi^*g$-Continuous Functions ................. 79
