ACKNOWLEDGEMENTS

Apart from my personal efforts to complete this research work, the success of this research mainly depends on the encouragement, support and guidelines of many people. There are so many to thank. First and foremost I would like to express the deepest appreciation to my research supervisor Dr J Dominic for his persistent support, words of encouragement, priceless guidance throughout my research work. It is impossible to finish this task without his support and assistance.

Caledonian College of Engineering, Oman permitted me to join under the staff development programme of the college and also supported me in all possible ways to pursue the research. I cannot even imagine this research without their permission and support. I don’t have words to express my gratitude to the Caledonian College of Engineering and am always grateful to them for their support to move to the next level in my career as well as to successfully complete my research work.

I articulate my sincere gratitude to Mr Shivakumar for his enthusiastic technical support, which helped to shape up the research work and to improve its quality. Whenever I approached him with any doubts, he patiently clarified all my doubts.

I express my utmost thanks to Mr Firdhouse for proofreading the thesis and spent his valuable time to make the thesis error free. Furthermore, I would also like to acknowledge with much appreciation to the educational institutions for sharing the required information to complete the research productively. The research work cannot move a step forward without the data collected from these institutions. My special thanks go to all of them.

Last but not least I thank my family members and friends for their morale support and all assistances, which ultimately lead to complete the task without much pain. Above all, I pray the Almighty for all the blessings throughout my life and am also thankful to Almighty for helping me to overcome all hurdles during the course of my research work.
